Ravel,J., Raeko,D.A., Shumway,M.F., Jiang,L., Cer,R.Z.,  
Federova,N.B., Salzberg,S. and Fraser,C.M.  
Submitted (17-MAY-2004) The Institute for Genomic Research, 9712  
Medical Center Dr, Rockville, MD 20850, USA  
On May 21, 2004 this sequence version replaced gi:47499967.  
This sequence is to be utilized as the reference strain for  
Bacillus anthracis research - all other sequences should be  
compared to this sequence.

COMMENT

The sequence in this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described  
in the feature table below represents a scaffold in the Atlas  
assembly (a 'contig-scaffold'). Within each contig-scaffold,  
individual sequence contigs are ordered and oriented, and separated  
by sized gaps filled with Ns to the estimated size. The sequence  
may extend beyond the ends of the clone and there may be sequence  
contigs within a contig-scaffold that consist entirely of whole  
genome shotgun sequence reads. Both end sequences and whole genome  
shotgun sequence only contigs will be indicated in the feature  
table.

On May 10, 2003 this sequence version replaced gi:24942826.  
 The sequence in this assembly is a combination of BAC based reads  
 and whole genome shotgun sequencing reads assembled using Atlas  
 (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described  
 in the feature table below represents a scaffold in the Atlas  
 assembly (a 'contig-scaffold'). Within each contig-scaffold,  
 individual sequence contigs are ordered and oriented, and separated  
 by sized gaps filled with Ns to the estimated size. The sequence  
 may extend beyond the ends of the clone and there may be sequence  
 contigs within a contig-scaffold that consist entirely of whole  
 genome shotgun sequence reads. Both end sequences and whole genome  
 shotgun sequence only contigs will be indicated in the feature  
 table.

TITLE  
JOURNAL  
COMMENT  
Direct Submission  
Submitted (09-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On May 9, 2003 this sequence version replaced gi:2518885.  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/project/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

PT New oligonucleotides that hybridize specifically to a *Bacillus anthracis* sequence, useful for detecting cutaneous and respiratory *Bacillus anthracis* infections.

XX Claim 1; SEQ ID NO 24; 61pp; English.

CC The present invention relates to an oligonucleotide of 20-40 nucleotides  
CC that specifically hybridizes to a sequence contained in a *Bacillus*  
CC *anthracis* target sequence. The methods and compositions of the present  
CC invention are useful for detecting the presence of *Bacillus anthracis*  
CC nucleic acid in a sample, in particular for detecting cutaneous and  
CC respiratory anthrax infections. Two synthetic genetic target sequences,  
CC derived from paga and capB gene sequences, were synthesized to provide  
CC known standards for testing oligonucleotides for detection of the genes  
CC carried by the plasmids pXO1 and pXO2, without requiring handling of  
CC virulent *Bacillus anthracis*. The present sequence represents a paga  
CC target sequence.

PT Immunogenic composition for preparing a vaccine against a lethal  
PT infection of *Bacillus anthracis* in an animal, comprises an immunizing  
PT amount of a recombinant *B. anthracis* protective antigen protein and/or  
PT lethal factor protein.

XX Disclosure; SEQ ID NO 25; 143pp; English.

XX The present invention relates to immunogenic compositions useful for  
CC preparing a vaccine against a lethal infection of *Bacillus anthracis* in  
CC an animal. The compositions comprise an immunizing amount of a  
CC recombinant *B. anthracis* protective antigen (rPA) protein and a  
CC recombinant *B. anthracis* lethal factor (rLF) protein. The composition and  
CC methods are useful in protecting against anthrax or lethal infections  
CC caused by *B. anthracis*. The present sequence is pBP15 vector DNA for the  
CC expression of *Bacillus anthracis* 27 kDa N-terminal PA deletion mutant

CC (PA27). This sequence is used in the invention.

XX
XX Screening Bacillus anthracis toxicity inhibitor (?) by generating
XX recombinant protective antigen 32, comparing fluorescence of cells
XX contacted with PA32-fluorescent marker fusion protein before, after
XX contact with T.
XX
XX Claim 1, Col 13-14; 14pp; English.
XX
XX The present sequence is that of DNA encoding Bacillus anthracis 32 kDa
XX protective antigen PA32 (see AAM50707), comprising domain 4 of protective
XX antigen PA83. The PA32 DNA was obtained by PCR amplification using B.
XX anthracis Sterne strain pXOI as template and the PA83 gene-derived
XX primers given in ABA91382-83. A claimed method for screening inhibitors
XX of the toxicity of B. anthracis involves: generating recombinant PA32 DNA
XX and ligating it to enhanced green fluorescent protein (EGFP); expressing
XX the gene fusion to produce EGFP-PA32 protein; contacting this with a
XX first sample of mammalian cells; measuring the fluorescence from
XX individual cells in the sample; mixing EGFP-PA32 with a potent toxicity
XX inhibitor of B. anthracis; contacting this mixture with individual cells
XX in a second sample of mammalian cells; measuring the fluorescence from
XX individual cells in the second sample; and comparing the effectiveness
XX of the toxicity inhibitor being determined from a decrease of
XX fluorescence from cells in the second sample. The mammalian cells are
XX preferably A549 human bronchial epithelial cells, and fluorescence is
XX detected using flow cytometry. The assay can be used as a rapid screen
XX for compounds which disrupt binding of PA to cells. 4 Human scFvs (see
XX ABA91388-91) have been identified as potential prophylactics or
XX therapeutics against anthrax poisoning. High intracellular expression
XX levels and ease of purification make recombinant PA32 an attractive
XX vaccine candidate or therapeutic for anthrax poisoning. DNA vaccines are
XX also envisaged

XX
XX Inhibiting toxicity of Bacillus anthracis, useful for treating anthrax
XX poisoning comprising introducing a DNA-encoding single-chain Fv fragment
XX protein against protective antigen PA83.
XX
XX Disclosure; SEQ ID NO 7; 20pp; English.
XX
XX The invention relates to inhibiting the toxicity of Bacillus anthracis
XX comprising introducing at least one type of DNA-encoding single-chain F v
XX fragment (scFv) protein into host mammalian cells, where the host
XX mammalian cells produce an immunoglobulin that functions in an immune
XX response against protective antigen PA83 (and also PA32) of B. anthracis.
XX Also disclosed is a method for screening for inhibitors of the toxicity
XX for B. anthracis. The scFv protein is selected from scFv 1 protein, scFv
XX 4 protein or its mixtures. The host mammalian cells comprise human
XX epithelial cells. The method is useful for inhibiting the toxicity of
XX Bacillus anthracis. The protein can be used as a vaccine or for treating
XX anthrax poisoning. It can also be used as a rapid assay for other small
XX molecule inhibitors of PA binding to cell receptors. EGFP (enhanced green
XX fluorescent protein)-PA32 fusion proteins were used in assays designed to
XX identify scFv proteins which may protect against B. anthracis infection.
XX The present sequence encodes B. anthracis PA32.

PT	Immunogenic composition for preparing a vaccine against a lethal
PT	infection of <i>Bacillus anthracis</i> in an animal, comprises an immunizing
PT	amount of a recombinant <i>B. anthracis</i> protective antigen protein and/or
XX	lethal factor protein.
XX	
PS	Disclosure; SEQ ID NO 23; 143pp; English.
XX	
CC	The present invention relates to immunogenic compositions useful for
CC	preparing a vaccine against a lethal infection of <i>Bacillus anthracis</i> in
CC	an animal. The compositions comprise an immunising amount of a
CC	recombinant <i>B. anthracis</i> protective antigen (rPA) protein and a
CC	recombinant <i>B. anthracis</i> lethal factor (rLF) protein. The composition and
CC	method are useful in protecting against anthrax or lethal infections
CC	caused by <i>B. anthracis</i> . The present sequence is pBP13 vector DNA for the
CC	expression of <i>Bacillus anthracis</i> 47 kDa N-terminal PA deletion mutant
CC	(PA47). This sequence is used in the invention.

PT New immunogenic reagent having a polypeptide of the full length  
PT Protective antigen of Bacillus anthracis, useful for treating B.  
PT anthracis infection or in preparing a medicament for the prophylaxis or  
PT treatment of the infection.  
XX  
XX Example 5; Fig 3; 40pp; English.  
PS  
XX The present invention relates to an immunogenic reagent, which produces  
CC an immune response that is protective against Bacillus anthracis. The  
CC reagent comprises one or more polypeptides which together represent up to  
CC three domains of the full length Protective antigen (PA) of Bacillus  
CC anthracis or variants of these, and at least one of the domains comprises  
CC domain 1 or domain 4 of PA or its variant. The invention is used as a  
CC vaccine. The immunogenic reagent is useful in the preparation of a  
CC medicament for the prophylaxis or treatment of B. anthracis infection.  
CC The present sequence is Bacillus subtilis protective antigen domain

XX New non-pathogenic spore comprising an antigenic fragment of anthrax  
PT protective antigen, useful as an anthrax vaccine or for manufacturing an  
PT anthrax vaccine.  
XX  
XX Claim 5; SEQ ID NO 10; 90pp; English.  
XX  
XX The present invention relates to a non-pathogenic spore comprising an  
CC antigenic fragment of anthrax protective antigen. Also given is a  
CC pharmaceutical composition comprising a non-pathogenic spore comprising  
CC at least an antigenic fragment of anthrax protective antigen in  
CC association with a pharmaceutical carrier and/or excipient; and methods  
CC of inducing immunity to anthrax in a mammal susceptible to anthrax  
CC infection. The Bacillus species spore is a spore from many species such  
CC as Bacillus alvei; Bacillus baduui; Bacillus brevis and preferably a  
CC spore from Bacillus subtilis. The spore comprises an antigenic fragment

CC of anthrax protective antigen in the form of a protein attached to the  
CC proteinaceous coat of the spore. It comprises an antigenic fragment of  
CC anthrax protective antigen encoded in the form of DNA which is adapted to  
CC be expressed when the spore germinates. The antigenic fragment is one or  
CC more of: PA83 which comprises a sequence of SEQ ID NO: 6; PA63 which  
CC comprises a sequence of SEQ ID NO: 7; Domain 1 of the protective antigen  
CC which has a sequence of SEQ ID NO: 1; Domain 2 of the protective antigen  
CC which has a sequence of SEQ ID NO: 2; Domain 3 of the protective antigen  
CC which has a sequence of SEQ ID NO: 3; Domain 4 (residues 595-735) of the  
CC protective antigen which has a sequence of SEQ ID NO: 4; and Domain D1b23  
CC which is a sequence of SEQ ID NO: 10. The composition further comprises  
CC an adjuvant that potentiates an antigen-specific immune response. The  
CC composition (including the spore) is useful as an anthrax vaccine or for  
CC manufacturing an anthrax vaccine. The composition and method are used for  
CC inducing an immune response against anthrax. The present sequence is DNA  
CC encoding anthrax protective antigen domain D1b23.

XX Producing recombinant *Bacillus anthracis* Protective Antigen protein  
PT encoded by an expression vector having a nucleotide sequence being codon-  
PT optimized for expression in yeast, useful for manufacturing anthrax  
PT vaccines.  
XX  
PS Example 1; SEQ ID NO 47; 91pp; English.  
XX  
XX The specification describes a method for producing recombinant *Bacillus*  
CC anthracis protective antigen protein. The method comprises providing an  
CC expression vector having a polynucleotide encoding a *Bacillus anthracis*  
CC protective antigen protein which is codon-optimized for expression in  
CC yeast, transforming a yeast with the vector, fermenting the transformed  
CC yeast for the expression of the protein, and isolating the protein. The

CC protective antigen protein is PA63 or PA83. The method of the invention  
CC is useful for the produce of antigen protein, which is used for  
CC prophylactic immunization against anthrax infections. The present  
CC sequence encodes a PA63 fragment.

PS  
XX  
XX Disclosure; Page 35; 35pp; English.  
XX  
XX The invention provides a recombinant DNA construct that comprises a  
CC vector and at least one nucleic acid (or its fragment) encoding a  
CC combination of Bacillus anthracis proteins, selected from protective  
CC antigen (PA), MAT-PA (PA with its secretory signals removed), TPA-PA (PA  
CC with its secretory signals replaced with those of tissue plasminogen  
CC activator) and PA63 (63 kDa PA). The construct is useful as a DNA vaccine  
CC for anthrax and in producing infectious alpha virus particles. These  
CC particles, expressing the B. anthracis proteins are useful also as  
CC vaccines for anthrax. Host cells transformed with the construct are  
CC useful for analyzing the effectiveness of drugs and agents that inhibit  
CC anthrax or B. anthracis proteins. The present sequence represents a B.  
CC anthracis PA63 protein encoding DNA

PS
XX
XX The present invention relates to immunogenic compositions useful for
CC preparing a vaccine against a lethal infection of Bacillus anthracis in
CC an animal. The compositions comprise an immunising amount of a
CC recombinant B. anthracis protective antigen (rPA) protein and a
CC recombinant B. anthracis lethal factor (rLF) protein. The composition and
CC methods are useful in protecting against anthrax or lethal infections
CC caused by B. anthracis. The present sequence is pBP108 expression vector
CC DNA for the expression of Bacillus anthracis LF-PA fusion protein. This
CC sequence is used in the invention.

 XX  
 XX Nucleic acid encoding anthrax toxin fusion protein - useful for  
 PT targeting toxin to specific cells, eg for killing tumour cells or HIV-  
 PT infected cells.  
 XX  
 XX Example 6; Page 111-113; 124pp; English.  
 XX  
 XX The sequence encoding the protective antigen of Bacillus anthracis may be  
 CC used in the construction of a nucleic acid which encodes a fusion protein  
 CC comprising the anthrax protective antigen binding domain of the native  
 CC anthrax lethal factor and a sequence encoding an activity inducing domain  
 CC of a second protein. Such fusion proteins are useful for the specific  
 CC killing of tumour cells or the killing of cells infected with  
 CC intracellular pathogens, especially HIV, depending on the second  
 CC component. The protective antigen and other toxins require proteolytic  
 CC cleavage to acquire activity. Since some cells infected with an  
 CC intracellular pathogen possess an active protease with quite a narrow  
 CC substrate specificity e.g. HIV, the protease cleavage site found in the  
 CC native toxin is replaced with an intracellular pathogen specific protease  
 CC site (See AAR60184-88). The protease in cells that are infected with an  
 CC intracellular pathogen cleaves the modified toxin which is then rendered  
 CC active and kills the cell. This sequence encodes the Bacillus anthracis  
 CC protective antigen but the nucleotide originally at positions 482-523  
 CC have been replaced with the cassette described in AA070186, resulting in  
 CC replacement in the corresponding protein of amino acids 162-171 with the  
 CC HIV protease cleavable sequence described in AAR60186. (Updated on 25-MAR  
 CC -2003 to correct PN field.)

 XX  
 XX The specification describes a method for producing recombinant Bacillus  
 CC anthracis protective antigen protein. The method comprises providing an  
 CC expression vector having a polynucleotide encoding a Bacillus anthracis  
 CC protective antigen protein which is codon-optimized for expression in  
 CC yeast, transforming a yeast with the vector, fermenting the transformed  
 CC yeast for the expression of the protein, and isolating the protein. The  
 CC protective antigen protein is PA63 or PA83. The method of the invention  
 CC is useful for the produce of antigen protein, which is used for  
 CC prophylactic immunization against anthrax infections. The present  
 CC sequence encodes a PA83 fragment.

XX  
CC The invention relates to a B moiety of pore-forming binary A-B toxin or  
CC its fragment, where the moiety has a mutation that inhibits its pore-  
CC forming ability and is selected from S382, N399, and N422 of the *Bacillus*  
CC anthracis protective antigen (PA) appearing as ADM05483. Also included  
CC are a vaccine composition comprising the mutant B moiety or its fragment  
CC (and a carrier), preventing or treating a bacterial infection in a mammal  
CC by administering the vaccine to the mammal, a nucleic acid encoding the  
CC mutant B moiety, a vector comprising the nucleic acid and a purified  
CC antibody that specifically binds a B moiety, but fails to bind a  
CC naturally occurring B moiety. The B moiety is selected from *Clostridium*  
CC difficile, *C. perfringens*, *C. spiroforme*, *C. botulinum*, and *Bacillus*  
CC cereus. The mutation inhibits the pore-forming ability of the toxin in  
CC vivo. The B moiety and vaccine composition are useful for preventing or

CC creating a bacterial infection, e.g. anthrax. The present sequence  
CC encodes the wild-type PA protein.

PT New non-pathogenic spore comprising an antigenic fragment of anthrax  
PT protective antigen, useful as an anthrax vaccine or for manufacturing an  
PT anthrax vaccine.

PS Disclosure; SEQ ID NO 17; 90pp; English.

XX The present invention relates to a non-pathogenic spore comprising an  
CC antigenic fragment of anthrax protective antigen. Also given is a  
CC pharmaceutical composition comprising a non-pathogenic spore comprising  
CC at least an antigenic fragment of anthrax protective antigen in  
CC association with a pharmaceutical carrier and/or excipient; and methods  
CC of inducing immunity to anthrax in a mammal susceptible to anthrax  
CC infection. The Bacillus species spore is a spore from many species such  
CC as Bacillus alvei; Bacillus bedius; Bacillus brevis and preferably a  
CC spore from Bacillus subtilis. The spore comprises an antigenic fragment  
CC of anthrax protective antigen in the form of a protein attached to the  
CC proteinaceous coat of the spore. It comprises an antigenic fragment of  
CC anthrax protective antigen encoded in the form of DNA which is adapted to  
CC be expressed when the spore germinates. The antigenic fragment is one or  
CC more of: PA63 which comprises a sequence of SEQ ID NO: 6; PA63 which  
CC comprises a sequence of SEQ ID NO: 7; Domain 1 of the protective antigen  
CC which has a sequence of SEQ ID NO: 1; Domain 2 of the protective antigen  
CC which has a sequence of SEQ ID NO: 2; Domain 3 of the protective antigen  
CC which has a sequence of SEQ ID NO: 3; Domain 4 (residues 595-735) of the  
CC protective antigen which has a sequence of SEQ ID NO: 4; and Domain D1b23  
CC which is a sequence of SEQ ID NO: 10. The composition further comprises  
CC an adjuvant that potentiates an antigen-specific immune response. The  
CC composition (including the spore) is useful as an anthrax vaccine or for  
CC manufacturing an anthrax vaccine. The composition and method are used for  
CC inducing an immune response against anthrax. The present sequence is DNA

CC encoding anthrax protective antigen, PA63.

PT Recombinant DNA construct useful as vaccines for anthrax, in producing  
PT host cells for analyzing the drugs and agents inhibiting anthrax.

PS Disclosure; Page 34; 35pp; English.

XX The invention provides a recombinant DNA construct that comprises a  
CC vector and at least one nucleic acid (or its fragment) encoding a  
CC combination of Bacillus anthracis proteins, selected from protective  
CC antigen (PA), MAT-PA (PA with its secretory signals removed), TPA-PA (PA  
CC with its secretory signals replaced with those of tissue plasminogen  
CC activator) and PA63 (63 KDa PA). The construct is useful as a DNA vaccine  
CC for anthrax and in producing infectious alpha virus particles. These  
CC particles, expressing the B. anthracis proteins are useful also as  
CC vaccines for anthrax. Host cells transformed with the construct are  
CC useful for analyzing the effectiveness of drugs and agents that inhibit  
CC anthrax or B. anthracis proteins. The present sequence represents a B.  
CC anthracis MAT-PA protein encoding DNA

PT New attenuated bacterium capable of expressing a heterologous protein,

PT which is under the control of a promoter, useful as a vaccine against

PT Bacillus anthracis infection, or for treating Bacillus anthracis

PT infection.

PS Claim 10; SEQ ID NO 9; 83pp; English.

CC The invention provides an attenuated bacterium which is capable of

CC expressing a heterologous protein. The expression of the heterologous

CC protein is under the control of a promoter selected from 8 fully defined

CC sequences ADY84827-ADY84834. The attenuated bacterium is preferably

CC Salmonella typhi or Salmonella typhimurium. The heterologous protein

CC comprises an antigenic sequence derived from a virus, bacterium, fungus,

CC yeast or parasite, and is especially a protective antigen (PA) of

CC Bacillus anthracis. A claimed live attenuated vaccine for immunization

CC against anthrax comprises an attenuated galactose epimerase-less mutant

CC strain of S. typhi (e.g. strain Ty21a) carrying a Bacillus anthracis PA,

CC especially a wild-type PA or its immunogenic fragment. The PA is

CC preferably encoded by a low-copy plasmid such as pGS2. The plasmid

CC promotes expression of the PA by a ntb promoter or by a Sec signal

CC sequence. The vaccine is used in a claimed method of immunizing a

CC susceptible host against B. anthracis disease. The present sequence is

CC the B. anthracis PA coding sequence (wild-type).

XX
XX Novel Bacillus anthracis protective antigen having mutations conferring
XX enhanced resistance to proteolytic degradation compared to wild type
XX antigen, useful for inducing antibodies having neutralizing activity
XX anthrax toxin.
XX
XX Example 5; SEQ ID NO 3; 30pp; English.
XX
XX The invention describes a recombinant Bacillus anthracis protective
XX antigen (PA), modified to incorporate one or more mutations comprising an
XX amino acid deletion or substitution in a flexible, exposed, or loop
XX segment of the PA protein, where the one or more mutations confers
XX enhanced resistance to proteolytic degradation compared to wild type PA.
XX A pharmaceutical composition (I) comprising PA and physiologically
XX acceptable carrier or a composition (II) comprising a synthetic construct
XX encoding PA and a carrier is useful for inducing serum antibodies that
XX have neutralising activity for a B.anthraxis toxin which involves
XX administering (i) to a mammal (human), sufficient to elicit production of
XX the antibodies. The antibodies protect the mammal against the infection.
XX (i) is useful for vaccinating a human against B.anthraxis infection. An
XX anti-PA-antibody containing composition is useful for passively
XX immunising a mammal against the toxic effect of B.anthraxis. PA is useful
XX as vaccines to induce serum antibodies which are useful to prevent, treat
XX or reduced the severity of infections caused by B.anthraxis, such as
XX inhalation anthrax, cutaneous anthrax and/or gastrointestinal anthrax. PA
XX exhibits enhanced stability to proteolytic degradation that is increased
XX by at least 25% compared to proteolytic stability of wild-type PA under
XX comparable conditions. This sequence encodes an exemplary double
XX protective antigen (PA) mutant comprising deletion of residues 162-167
XX and residues 304-317 and substitutions S168I and S319G.

PT Protecting animal against lethal infection with Bacillus anthracis, by  
PT administering wildtype or mutated form of Bacillus anthracis lethal  
PT factor protein or its fragment or a nucleic acid encoding the mutated  
PT protein.  
XX  
XX  
PS Claim 25; Fig 2; 33pp; English.  
XX  
CC This sequence encodes the B. anthracis protective antigen (PA). An  
CC immunogenic fragment of PA, pCPA, can be used to produce an immune  
CC response which protects an animal against lethal injection with Bacillus  
CC anthracis. DNA encoding the B. anthracis PA can be used in conjunction  
CC with DNA encoding the lethal factor (Lf) in a DNA vaccine. Using a DNA  
CC vaccine which encodes the mutated Lf protein or fragment alone or in  
CC combination with a DNA encoding the PA protein or its fragment, both  
CC components (humoral and cell-mediated) of the immune system are  
CC stimulated, which results in longer term immune memory response. The  
CC combined use of a mutated Lf and PA gene or their fragments results in a  
CC higher level of immune response, as judged by overall serum antibody  
CC titers for Lf and PA antigens, than the use of either Lf or PA genes in  
CC separate immunizations

PT Immunogenic conjugate, useful for inhibiting or treating infection and/or  
PT disease caused by Bacillus anthracis or other bacilli, comprises Bacillus  
PT capsular poly-gamma-glutamic acid polypeptide covalently linked to  
PT carrier.  
XX  
XX  
PS Disclosure; SEQ ID NO 2; 66pp; English.

CC The invention relates to an immunogenic conjugate comprising a Bacillus  
CC capsular poly-gamma-glutamic acid (gammaPGA) polypeptide covalently  
CC linked to a carrier, where the conjugate elicits an immune response in a  
CC subject. Also included are a composition comprising the conjugate and a  
CC pharmaceutically acceptable carrier (for use in eliciting an immune  
CC response against Bacillus antigenic epitope, preferably Bacillus  
CC anthracis antigenic epitope in a subject) and an isolated antibody that  
CC binds to the Bacillus capsular gammaPGA polypeptide (that recognizes  
CC antigenic epitopes on both the Bacillus capsular gammaPGA polypeptide,  
CC or that binds Bacillus anthracis capsular gammaPGA). The carrier may  
CC comprise recombinant B. anthracis protective antigen. The composition and  
CC conjugate are useful for eliciting an immune response against a Bacillus  
CC antigenic epitope in a subject and for inhibiting or treating infection  
CC and/or disease caused by B. anthracis or other bacilli. The immune  
CC response comprises opsonophagocytic activity. The composition is useful  
CC for active immunization for preventing B. anthracis infections and for  
CC preparation of immune antibodies. The present sequence encodes Bacillus  
CC anthracis protective antigen, PA.

XX	The present invention relates to a non-pathogenic spore comprising an
CC	antigenic fragment of anthrax protective antigen. Also given is a
CC	pharmaceutical composition comprising a non-pathogenic spore comprising
CC	at least an antigenic fragment of anthrax protective antigen in
CC	association with a pharmaceutical carrier and/or excipient; and methods
CC	of inducing immunity to anthrax in a mammal susceptible to anthrax
CC	infection. The Bacillus species spore is a spore from many species such
CC	as Bacillus alvei; Bacillus badarius; Bacillus brevis and preferably a
CC	spore from Bacillus subtilis. The spore comprises an antigenic fragment
CC	of anthrax protective antigen in the form of a protein attached to the
CC	proteolaceous coat of the spore. It comprises an antigenic fragment of
CC	anthrax protective antigen encoded in the form of DNA which is adapted to
CC	be expressed when the spore germinates. The antigenic fragment is one or
CC	more of: PA83 which comprises a sequence of SEQ ID NO: 6; PA63 which
CC	comprises a sequence of SEQ ID NO: 7; Domain 1 of the protective antigen
CC	which has a sequence of SEQ ID NO: 1; Domain 2 of the protective antigen
CC	which has a sequence of SEQ ID NO: 2; Domain 3 of the protective antigen
CC	which has a sequence of SEQ ID NO: 3; Domain 4 (residues 595-735) of the
CC	protective antigen which has a sequence of SEQ ID NO: 4; and Domain Dnb23
CC	which is a sequence of SEQ ID NO: 10. The composition further comprises
CC	an adjuvant that potentiates an antigen-specific immune response. The
CC	composition (including the spore) is useful as an anthrax vaccine or for
CC	manufacturing an anthrax vaccine. The composition and method are used for
CC	inducing an immune response against anthrax. The present sequence is DNA
CC	encoding full length anthrax protective antigen, PA83.

XX
XX New polynucleotide vaccine composition comprising a nucleic acid sequence
PT that encodes a Bacillus anthracis antigen, useful for eliciting an immune
PT response against B. anthracis in a subject.
XX
XX Example 1; SEQ ID NO 3; 40pp; English.
XX
XX The invention relates to a polynucleotide vaccine composition comprising
CC a Bacillus anthracis antigen-encoding nucleic acid which is operatively
CC linked to a promoter for expression of the antigen in a mammalian cell.
CC The invention also relates to use of the vaccine composition of the
CC invention for eliciting an immune response in an individual. Preferably,
CC the antigen encoded by the polynucleotide vaccine is obtained or derived
CC from the Bacillus anthracis Protective Antigen (PA), a non-toxic factor
CC responsible for binding to cell membranes which is known to confer active
CC protection against anthrax. The encoded Bacillus anthracis antigen may
CC also be linked to a leader signal peptide (such as the tissue plasminogen
CC activator (TPA) signal peptide) which permits its secretion. The vaccine
CC composition may additionally comprise an adjuvant component such as a CpG
CC sequence, a nucleic acid encoding a polypeptide adjuvant, a lipid, a non-
CC protein hormone or a vitamin. The polynucleotide vaccine composition of
CC the invention can be administered directly into skin or muscle tissue,
CC preferably in particulate form, and is useful for inducing a protective
CC immune response against Bacillus anthracis infection. The present
CC sequence represents the complete nucleotide sequence encoding the
CC Bacillus anthracis Protective Antigen, used in the construction of a
CC Bacillus anthracis polynucleotide vaccine in an example of the invention.

 PT Identifying immunogenic peptides representative of a structural element  
 PT of a target protein comprising detecting an epitope corresponding to the  
 PT molecular model of the three dimensional structure of the epitope in the  
 PT target protein.  
 XX  
 PS Example 1; Page 106-108; 0pp; English.  
 XX  
 CC The invention relates to identifying an immunogenic peptide

CC representative of a structural element of a target protein. The method  
 CC involves detecting in a molecular model of a chimeric polypeptide  
 CC comprising a selected epitope linked to a scaffold protein, an epitope  
 CC having a three dimensional conformation corresponding to the molecular  
 CC model of the three dimensional structure of the epitope in the target  
 CC protein. The methods of the invention are useful for identifying  
 CC immunogenic peptides of a target protein having a known three dimensional  
 CC structure, or of a target protein having a known amino acid sequence but  
 CC unknown three dimensional structure. The immunogenic peptides are useful  
 CC as vaccines for stimulating an immune response in a subject against  
 CC infectious microorganisms including protozoan (Entamoeba histolytica),  
 CC yeast (Candida albicans) or bacterium (Shigella flexneri, Yersinia  
 CC pestis, Serratia marcescens or Bacillus anthracis). The present sequence  
 CC represents a B. anthracis protective antigen (PA) DNA (GenBank Accession  
 CC No. 143280), where the antigen can be used as a target protein

## ALIGNMENTS

RESULT 1  
US-09-273-839A-7

Sequence 7, Application US/09273839A  
Patent No. 6329156  
GENERAL INFORMATION:  
APPLICANT: Ciriaco, Nick M  
APPLICANT: Jackson, Paul J  
APPLICANT: Lehnert, Bruce E  
TITLE OF INVENTION: Disruption of Anthrax Toxin Binding to Cell Surface  
FILE REFERENCE: S-89/662  
CURRENT APPLICATION NUMBER: US/09/273, 839A  
CURRENT FILING DATE: 1999-03-22  
NUMBER OF SEQ ID NOS: 12  
SOFTWARE: PatentIn Ver. 2.0  
SEQ ID NO 7  
LENGTH: 867  
TYPE: DNA  
ORGANISM: Bacillus anthracis  
US-09-273-839A-7

Query Match 100.0%; Score 59; DB 3; Length 867;  
Best Local Similarity 100.0%; Pred. No. 2.5e-25;  
Matches 59; Conservative 0; Mismatches 0; Indels 0; Gaps 0;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

US-11-055-557-11
; Sequence 11, Application US/11055557
; Publication No. US20050255083A1
; GENERAL INFORMATION:
; APPLICANT: Leppla, Stephen H.
; APPLICANT: Liu, Shi-Hui
; APPLICANT: Bugee, Thomas H.
; APPLICANT: as represented by The Government of the United States of America
; APPLICANT: Department of Health and Human Services
; TITLE OF INVENTION: Multiple Identifying Characteristics
; FILE REFERENCE: 015280-501100US
; CURRENT APPLICATION NUMBER: US/11/055,557
; PRIOR FILING DATE: 2005-02-09
; PRIOR APPLICATION NUMBER: US 60/543,417
; NUMBER OF SEQ ID NOS: 42
; SOFTWARE: PatentIn Ver. 2.1
; SEQ ID NO 11
; LENGTH: 2295
; TYPE: DNA
; ORGANISM: Bacillus anthracis

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

 Clone Distribution: I.M.A.G.E. Consortium/LNLW:  
<http://image.llnl.gov>  
 Naming Conventions: EST name is generated by the concatenation of the JGI Clone id and the direction of sequencing. The suffix 'rev' indicates a reverse sequencing read of the insert. It does not necessarily reflect the orientation of the insert.  
 Poly-A: Based upon the presence of a run of 14 or more T residues at the beginning of the sequence, this clone was polyadenylated.  
 The resulting Poly-T sequence has been removed.

0.005 inch orifice at constant velocity. The sheared DNA  
 was blunt end-repaired with T4 DNA polymerase and T4  
 polynucleotide kinase. Adaptor oligonucleotides were  
 ligated to the blunt ends in high molar excess. The  
 ligated DNA was purified and size-selected for a 9.5 to  
 10.5 kb range using preparative agarose gel  
 electrophoresis. Vector DNA was prepared from a derivative  
 of pMD42 (g14732114|gb|AF129072.1), a copy-number  
 inducible derivative of plasmid R1. The vector was ligated  
 with adaptors complementary to the insert adaptors and  
 purified. The sheared, adaptor mouse DNA was annealed to  
 adaptor vector DNA, and transformed into  
 chemically-competent E. coli XL10-Gold (Stratagene) cells  
 and selected for ampicillin resistance."

source

/note="Vector: PCMV-SPORT 6.1; Site 1: SCRV; Site 2:  
 NotI; Maize Full length cDNA library (3530 library)"  
 created by Invitrogen from multiple tissues; Organ: silks,  
 husks, ears, pollen, shoot tips, leaf, root tips, whole  
 seed, embryo. This is a Gateway compatible vector,  
 permitting clone movement to new vector backbones for  
 expression in diverse host cells using recombination  
 rather than restriction enzymes. poly(A) + mRNA was  
 prepared by Invitrogen, and equimolar amounts of RNA from  
 each of the 12 tissue samples were mixed together for  
 selection of mRNA with a 5' cap. After synthesis of cDNA,  
 a normalization step was conducted against the mixture of  
 RNA sources. Tissues prepared: 1. just emerging silks; 2.  
 inner husks from ears of sample #1; 3. 20 dap aleurone; 4.  
 immature tassels; stages from 1-2 mm to 1-2 cm; 5. 2 mm to  
 2 cm ears; 6. pollen; 7. 1 cm vegetative shoot tips from  
 15 day old seedlings; all leaves with an expanded or  
 partially expanded sheath were removed; 8. mature leaf  
 tissue; 9. 0.5 cm long root tips from 15 day old  
 seedlings; 10. 10 dap whole seed; 11. 12 dap endosperm and  
 embryo; 12. 17 dap endosperm and embryo. All of the  
 sequenced clones in Maize Full-length cDNA Project will be  
 archived at the University of Arizona. Clones, high  
 density filters and amplified library can be ordered from  
 the University of Arizona  
 (http://www.genome.arizona.edu/orders/)."

 musculus C57BL/6J (male) was obtained from the Jackson  
 Laboratory Mouse DNA Resource  
 (http://www.jax.org/resources/documents/dnares/). The DNA  
 was hydrodynamically shared by repeated passage through a  
 0.005 inch orifice at constant velocity. The sheared DNA  
 was blunt end-repaired with T4 DNA polymerase and T4  
 polynucleotide kinase. Adaptor oligonucleotides were  
 ligated to the blunt ends in high molar excess. The  
 adaptor DNA was purified and size-selected for a 9.5 to  
 10.5 kb range using preparative agarose gel  
 electrophoresis. Vector DNA was prepared from a derivative  
 of PMD42 (g114732114|gb|AF129072.1), a copy-number  
 inducible derivative of plasmid R1. The vector was ligated  
 with adaptors complementary to the insert adaptors and  
 purified. The sheared, adaptor mouse DNA was annealed to  
 adaptor vector DNA, and transformed into  
 chemically-competent E. coli XL10-Gold (Stratagene) cells  
 and selected for ampicillin resistance."

prepared and sequenced in Mouse Genome Encyclopedia

Project of Genome Exploration Research Group in Riken

Genomic Sciences Center and Genome Science Laboratory in

RIKEN. Division of Experimental Animal Research in Riken

contributed to prepare mouse tissues. 1st strand cDNA was

primed with a primer [5'

GAGAGAGAGAGATCCAGAGCTCTTTTCTTTTCTTTTCTTTVN 3'], cDNA was

prepared by using trehalose thermo-activated reverse

transcriptase and subsequently enriched for full-length by

cap-trapper. cDNA went through one round of normalization

to Rot = 10.0 and subtraction to Rot = 185.0. Second

strand cDNA was prepared with the primer adapter of

sequence [5' GAGAGAGAGATCCAGAGTATTAATTAATCCCCCCCCCC

3']. cDNA was cloned into the XhoI and BamHI sites.

Vector: a modified plucscript KS(+) after bulk excision

from Lambda PLoC I. Cloning sites, 5' end: SalI; 3' end:

BamHI"

/note="Vector: pWD42nv; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adapted DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (g1[473114]gb[AF129072.1]), a copy-number inducible derivative of plasmid 81. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adapted mouse DNA was annealed to adapted vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

/note="Vector: pMD42nv; Purified genomic DNA from M. musculus C57BL/6J (female) was obtained from the Jackson Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptor DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pMD42 (g14732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated

with adaptors complementary to the insert adaptors and purified. The sheared, adaptor mouse DNA was annealed to adaptor vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

 Email: mczody@broad.mit.edu  
 Primer A: No sequence submitted  
 Primer B: No sequence submitted  
 STS size: 901  
 Protocol:  
 23,021,928 chimpanzee whole genome shotgun reads were aligned to  
 the Human genome NCBI  
 Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors,  
 including Clint (Pan  
 troglodytes verus), 3 other Pan troglodytes verus chimps  
 (Donald,Karlén,Yvonne), 3 Pan  
 troglodytes troglodytes chimps (Noemie,Masuku,Clara) and 2 chimps  
 of unknown origin  
 (Gon,Unknown Chimp). Common names: Pan troglodytes verus is the  
 western chimp and Pan  
 troglodytes troglodytes is the central chimp. To be included in  
 chimpanzee SNP discovery, a  
 read must be at least 500bp in length, at least 50% of its base  
 calls must have Phred  
 score >= 20, at least 30% of its base calls must satisfy  
 SNQs(30,25)(single strand NQS, the  
 base in question has Phred score >= 30, the surrounding 10 bases in  
 the read have Phred  
 score >= 25), and the read must have at least 200 bp SNQs(30,25)  
 bases. Reads not uniquely  
 placed in the genome and read pairs whose two ends were not  
 consistently placed were

discarded. After above filtering, NQS(30,25) standard was applied  
 to all pairs of  
 overlapping reads to call NQS bases and SNPs. Alignments (between  
 two reads) with less  
 than 100 NQS bases or with SNP rate > 0.01 were discarded. To  
 exclude alignment between two  
 copies of a single read, comparisons between two reads that share  
 95% of their genome  
 alignments (>=95% bases of read A and >=95% bases of read B were  
 placed at the same locus  
 of human genome) were discarded.

 \* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 8 contigs. The true order of the pieces

\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence.  
\* as soon as it is available and the accession number will  
\* be preserved.

 ----- Project Information  
 Center project name: gch  
 Center clone name: 219107

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies; the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics  
 Sequencing vector: plasmid; n/a; 100% of reads  
 Chemistry: Dye-terminator Big Dye; 100% of reads  
 Assembly program: Phrap; version 0.990119  
 Consensus quality: 160115 bases at least Q40  
 Consensus quality: 160437 bases at least Q30  
 Consensus quality: 160628 bases at least Q20  
 Insert size: 109000; agarose-fp  
 Insert size: 160766; sum-of-contigs  
 Quality coverage: 13.64X in Q20 bases; agarose-fp  
 Quality coverage: 9.25X in Q20 bases; sum-of-contigs

----- NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.  
 \* This sequence will be replaced

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:  
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

## MAPPING INFORMATION:

The position of this clone was established as part of a collaboration between the Chimpanzee Chromosome Y Mapping Project (Jennifer F. Hughes, Tatyana Pyntikova, Helen Skalecky, Steve Rozen, and David C. Page at the Whitehead Institute for Biomedical Research, Cambridge MA) and the Washington University Genome Sequencing Center, St. Louis MO.

-----

NOTICE:

This sequence was finished as follows unless otherwise noted:  
 all regions were double stranded, sequenced with an alternate  
 chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by sequence  
 from more than one subclone; and the assembly was confirmed by  
 restriction digest.

## MAPPING INFORMATION:

The position of this clone was established as part of a  
 collaboration between the Chimpanzee Chromosome Y Mapping Project  
 (Jennifer F. Hughes, Tatyana Pyntikova, Helen Skaltsky, Steve  
 Rozen, and David C. Page at the Whitehead Institute for Biomedical  
 Research, Cambridge MA) and the Washington University Genome  
 Sequencing Center, St. Louis MO.

## SOURCE INFORMATION:

The CHORI-251 Chimpanzee BAC library has been constructed at the

Children's Hospital Oakland Research Institute, BACPAC Resources,  
 by Dr. Baoji Zhu. DNA was isolated from white blood cells obtained  
 from a male chimpanzee (Pan troglodytes, 'Clint', Yerkis #C0471;  
 birthdate:6-6-80). The clone and detailed information can be  
 obtained from Pieter de Jong and co-workers at  
<http://www.bacpac.chori.org>.

## NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

**COMMENT**

On May 14, 2003 this sequence version replaced gi:30524809. Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to confirm this sequence. Sequence data from the whole genome shotgun alone has only been used where it has a phred quality of at least 30.  
 ----- Genome Center  
 Center: Wellcome Trust Sanger Institute  
 Center code: SC  
 Web site: <http://www.sanger.ac.uk>  
 Contact: [humquery@sanger.ac.uk](mailto:humquery@sanger.ac.uk)

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em, EMBL; Sw, SWISSPROT; Tr, TREMBL; Wp, WORMPEP; Information on the WORMPEP database can be found at [http://www.sanger.ac.uk/Projects/C\\_elegans/wormpep](http://www.sanger.ac.uk/Projects/C_elegans/wormpep) RP23-83A14 is from the RPCI-23 Mouse BAC library constructed by the group of Pieter de Jong.

**COMMENT**

On Feb 1, 2005 this sequence version replaced gi:58330877. Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to confirm this sequence. Sequence data from the whole genome shotgun alone has only been used where it has a phred quality of at least 30.

----- Project Information
Center project name: dbv
Center clone name: 332G22
----- Summary Statistics
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 131539 bases at least Q40
Consensus quality: 132013 bases at least Q30
Consensus quality: 132394 bases at least Q20
Insert size: 131000; agarose-fp
Insert size: 134477; sum-of-ctrls
Quality coverage: 12.00x in Q20 bases; agarose-fp
Quality coverage: 11.78x in Q20 bases; sum-of-ctrls
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 5 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*

Submitted (06-JAN-2005) Arizona Genomics Institute, University of Arizona, 303 Forbes, Tucson, AZ 85721, USA  
 On Jan 6, 2005 this sequence version replaced gi:27356674.  
 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >=30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by more than one plasmid subclone; and the assembly was confirmed by restriction digest. There are three areas of single-subclones: 54466-54560, 57568-57653 and 115543-115568. From base 133735-133753 there are only PCR reads. The assembly overlaps from base 1-23123 with OSUNBa0090010 (accession # AC134237). The overlap is from 139009-162132 bases on OSUNBa0090010. The assembly overlaps from base 136321-149349 with OJ1263H11 (accession # AC118980). The overlap is from 1-13028 bases on OJ1263H11. The nucleotide sequence of this BAC clone was generated by combining Syngenta, Monsanto, and Arizona Genomics Institute sequencing data.

 Center project name: 456L03  
 -----  
 The sequence data in this record represents an 'enhanced'  
 version of a Phase 2 submission. Specifically, the indicated  
 order and orientation of each sequence contig has been  
 established using one or more of the following: read-pair  
 data from individual subclones, overlaps with neighboring  
 clones), alignment with available reference sequence (e.g.,  
 human), and/or confirmation by PCR testing. In addition,  
 the sequence assembly is based on at least 8X average  
 coverage in Q20 bases and has been reviewed to rule out  
 gross misassemblies, the low-quality ends of sequence  
 contigs have been trimmed away, and each base is associated  
 with a Phrap-derived quality score.  
 ----- Summary Statistics  
 Sequencing vector: plasmid; n/a; 100% of reads  
 Chemistry: Dye-terminator Big Dye; 100% of reads  
 Assembly program: Phrap; version 0.990319  
 Consensus quality: 18237 bases at least Q40  
 Consensus quality: 182594 bases at least Q30  
 Consensus quality: 182875 bases at least Q20  
 Insert size: 172000; agarose-gel  
 Insert size: 183031; sum-of-contigs

```

Quality coverage: 11.86x in Q20 bases; agarose-gel
Quality coverage: 11.15x in Q20 bases; sum-of-contigs
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 5 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.

## COMMENT

On Jun 28, 2005 this sequence version replaced gi:60498848.  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Consensus quality: 224917 bases at least Q30

Consensus quality: 227783 bases at least Q20

Estimated insert size: 228810; sum-of-contigs estimation

Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

\* NOTE: Estimated insert size may differ from sequence length

\* (see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)).

\* NOTE: This is a 'working draft' sequence. It currently

\* consists of 34 contigs. The true order of the pieces

\* is not known and their order in this sequence record is

\* arbitrary. Gaps between the contigs are represented as

\* runs of N, but the exact sizes of the gaps are unknown.

\* This record will be updated with the finished sequence

\* as soon as it is available and the accession number will

\* be preserved.

COMMENT  
On May 9, 2003 this sequence version replaced gi:24818196.  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence

may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence only contigs will be indicated in the feature table.

Summary Statistics  
Sequencing vector: Plasmid; n/a; 100% of reads  
Chemistry: Dye-terminator Big Dye, 100% of reads  
Assembly program: Phrap; version 0.960731  
Consensus quality: 335174 bases at least Q40  
Consensus quality: 339094 bases at least Q30  
Consensus quality: 34059 bases at least Q20  
Insert size: 341958; sum-of-configs

Quality coverage: 4.8 in Q20 bases; sum-of-configs

NOTE: This is a 'working draft' sequence. It currently consists of 26 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

STS size: 573
Protocol:
WGS-discovery (WGS):
Paired-end low-coverage whole genome shotgun reads were generated
from 9 breeds
(German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador

```

Retriever, English Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese Water Dog -100,000 each) and five other canids (Chinese, Alaskan, Indian and Spanish Gray Wolf as well as the Californian Coyote).

The WGS reads were placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 863872 reads were annotated as STSs and 485941 SNPs were annotated with alleles from the boxer and the breed or canid from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%.

WGA-discovery (WGA) of Boxer/Poodle SNPs: A second set of SNPs was generated using a similar methodology except that the contigs from the 1.5x poodle assembly (Kirkness 2003) were used instead of WGS reads. Since this sequence lacked base quality scores, arbitrary quality scores of phred 40 were assigned before the poodle sequence was placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated with alleles from the boxer and the poodle. The validation rate for these SNPs was estimated at approximately TBD%.

Internal-WGA-discovery (I-WGA): A third set of SNPs were discovered by comparing reads in the WGA assembly. SNPs were defined as mismatch positions that had a base quality of  $\geq 30$  on both reads in a region that aligned without gaps, and with at most one additional mismatch in the ten flanking bases. For each allele, at least one additional read had to confirm it. 731476 SNPs were annotated with alleles between the two boxer alleles. The validation rate for these SNPs was estimated at approximately TBD%.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

CC   The present invention relates to an oligonucleotide of 20-40 nucleotides
CC   that specifically hybridizes to a sequence contained in a Bacillus
CC   anthracis target sequence. The methods and compositions of the present
CC   invention are useful for detecting the presence of Bacillus anthracis
CC   nucleic acid in a sample, in particular for detecting cutaneous and
CC   respiratory anthrax infections. Two synthetic genetic target sequences,
CC   derived from pagA and capB gene sequences, were synthesized to provide
CC   known standards for testing oligonucleotides for detection of the genes
CC   carried by the plasmids pXOI and pXO2, without requiring handling of
CC   virulent Bacillus anthracis. The present sequence represents a capB
CC   target sequence.

PT Detecting *Bacillus anthracis* in a sample by amplifying *B. anthracis* caps.  
PT pA<sub>1</sub> and left nucleic acids followed by hybridization with labelled caps.  
PT pA<sub>2</sub> and left probes, and detection by fluorescence resonance energy  
PT transfer.

PS Disclosure; Page 3; 31pp; English.

CC The invention relates to detecting *Bacillus anthracis* in a biological or  
CC non-biological sample. The method involves (a) amplifying a portion of *B.*  
CC anthracis encapsulation protein B (capB) and/or protective antigen (pagA),  
CC and/or lethal factor (lef) nucleic acids using specific primers; (b)  
CC contacting the sample with a pair of capB and/or pagA and/or lef probes  
CC labelled with fluorescent moieties; and (c) detecting the presence or  
CC absence of fluorescence resonance energy transfer (FRET) between the  
CC probes. The method is useful for identifying *B. anthracis* DNA from  
CC specimens for diagnosis of *B. anthracis* infection and to identifying hoax  
CC cases of *B. anthracis*. The methods can also used for *B. anthracis*  
CC efficacy studies or epidemiology studies. The method is rapid, and allows  
CC real-time detection of *B. anthracis* in a biological sample or in a non-  
CC biological sample. The method is more sensitive and specific than  
CC existing assays. Sequences ACC11903-904 represent *B. anthracis* capB  
CC specific probes

XX
XX The present invention relates to an oligonucleotide of 20-40 nucleotides
CC that specifically hybridizes to a sequence contained in a Bacillus
CC anthracis target sequence. The methods and compositions of the present
CC invention are useful for detecting the presence of Bacillus anthracis
CC nucleic acid in a sample, in particular for detecting cutaneous and
```

```
CC respiratory anthrax infections. Two synthetic genetic target sequences,
CC derived from pagA and capB gene sequences, were synthesized to provide
CC known standards for testing oligonucleotides for detection of the genes
CC carried by the plasmids pX01 and pX02, without requiring handling of
CC virulent Bacillus anthracis. The present sequence represents a capB
CC probe, used in the pX01 and pX02 detection kits.

PS
XX
XX The invention relates to detecting Bacillus anthracis in a biological or
CC non-biological sample. The method involves (a) amplifying a portion of B.
CC anthracis encapsulation protein B (capB) and/or protective antigen (pagA)
CC and/or lethal factor (lef) nucleic acids using specific primers; (b)
CC contacting the sample with a pair of capB and/or pagA and/or lef probes
CC labelled with fluorescent moieties; and (c) detecting the presence or
CC absence of fluorescence resonance energy transfer (FRET) between the
CC probes. The method is useful for identifying B. anthracis DNA from
CC specimens for diagnosis of B. anthracis infection and to identifying hoax
CC cases of B. anthracis. The methods can also be used for B. anthracis
CC efficacy studies or epidemiology studies. The method is rapid, and allows
CC real-time detection of B. anthracis in a biological sample or in a non-
CC biological sample. The method is more sensitive and specific than
CC existing assays. Sequences ACC71913-914 represent B. anthracis capB
CC specific probes

 CC New rice promoter, useful for manipulating crop plants to alter or  
 CC improve phenotypic characteristics, e.g. produce large quantities of oil  
 CC or proteins, resistance to insecticides, virus or fungi, stress tolerance  
 CC or high nutritional value.  
 XX  
 PS Example 13; SEQ ID NO 3339; 230pp; English.  
 XX  
 CC The invention relates to plant nucleotide sequences that direct seed-  
 CC leaf- and/or stem-, panicle-, root- or pollen-specific or -preferential  
 CC or constitutive transcription of an operatively linked nucleic acid  
 CC segment. The invention also relates to a method for augmenting a plant  
 CC genome and a method of identifying a gene, where its expression is  
 CC altered in the seed, leaf, stem, panicle, pollen, root or is constitutive  
 CC in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower,  
 CC canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley,  
 CC sorghum, rice or wheat. The polynucleotides and the polypeptides they  
 CC encode are useful for manipulating crop plants to alter or improve  
 CC phenotypic characteristics, to produce large quantities of oil or  
 CC proteins, to incur resistance to insecticides, viruses or fungi, and to  
 CC incur stress tolerance (e.g. salt, cold or drought) to ensure the plants  
 CC have a high nutritional value with reduced apical dominance or dwarfism,  
 CC early flowering or altered metabolic pathways. This sequence represents a  
 CC plant nucleic acid of the invention. Note: The sequence data for this  
 CC patent did not form part of the printed specification but was obtained in  
 CC electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.

PT or congestive heart failure, comprises diagnostic oligonucleotides.  
XX  
PS Claim 26; Page 1927-1928; 0pp; English.  
XX  
CC The invention relates to a system for detecting gene expression, which  
CC comprises one or two isolated DNA molecules that detect expression of a  
CC gene, where the gene corresponds to any of 8143 oligonucleotides  
CC (ABZ00010-ABZ08152) each having 50 base pairs (bp). The system is useful  
CC for leukocyte expression profiling. It is particularly useful for  
CC diagnosing a disease, monitoring (rate of) progression of a disease,  
CC predicting therapeutic outcome, determining prognosis for a patient,  
CC predicting disease complications in an individual or monitoring response  
CC to treatment in an individual. The diseases include cardiac allograft  
CC rejection, kidney allograft rejection, liver allograft rejection,  
CC atherosclerosis, congestive heart failure, systemic lupus erythematosus,  
CC rheumatoid arthritis, osteoarthritis or cytomegalovirus infection. The

CC present sequence is that of a human leukocyte expressed cDNA of the  
CC invention

XX  
PS Disclosure; SEQ ID NO 9184; 36pp; English.  
XX  
CC The invention relates to an isolated polypeptide (I) associated with  
CC breast cancer which is encoded by a nucleic acid molecule comprising a  
CC nucleotide sequence (SI). Further disclosed is an antibody that binds to  
CC the polypeptide of the invention. The activity of the polypeptide of the  
CC invention may be described as cytostatic. The antibody is useful for  
CC detecting the presence of (I) in a sample. Nucleic acid molecules of the  
CC invention are useful in the detection of breast tumours. (I) is useful as  
CC a marker for breast cancer and in breast cancer therapy. Sequences given  
CC in records ACN78851-ACN92934 represent nucleic acid markers associated  
CC with breast cancer. Note: The sequence listing does not form part of the  
CC specification but may be obtained in electronic format from the USPTO web

 PT Diagnosing cancer in a mammal comprises determining amplification of  
 PT specific genes, e.g., serine/threonine kinase 6, in the genome of a  
 PT mammal.  
 XX  
 PS Claim 3; SEQ ID NO 649; 92bp; English.  
 XX  
 CC The invention relates to a novel method for diagnosing cancer in a  
 CC mammal. The method comprises determining amplification of specific genes,  
 CC given in the specification, in the genome of a mammal. The invention  
 CC further comprises methods for: diagnosing cancer or a pre-cancerous  
 CC condition in a mammal; inhibiting cancer or a pre-cancerous condition in  
 CC a mammalian cell; identifying an agent having therapeutic activity in a  
 CC human patient; identifying an anti-neoplastic agent; determining the  
 CC cancerous status of a cell; identifying a compound as an anti-neoplastic  
 CC agent; treating cancer; monitoring the progress of cancer therapy in a  
 CC patient; determining the likelihood of success of cancer therapy in a  
 CC patient; producing test data with respect to the anti-neoplastic activity  
 CC of a compound; and determining the progress of a treatment for cancer in  
 CC a patient following commencement of a cancer treatment on the patient.  
 CC The methods and compositions of the invention have cytostatic activity  
 CC and may be used in gene therapy. The method is useful in diagnosing or  
 CC treating cancer in a mammal. This polynucleotide sequence represents a  
 CC gene over-expressed in a cancerous cell, used in the novel cancer  
 CC diagnosis method of the invention.

 PT A method, useful for prognosing and treating solid tumor, comprises  
 PT comparing an expression profile of a gene expressed in peripheral blood  
 PT mononuclear cells to a reference expression profile of a gene.  
 XX  
 PS Disclosure; Page; 11pp; English.  
 XX  
 CC The invention describes a method comprising comparing an expression  
 CC profile of at least one gene in a peripheral blood sample of a patient to  
 CC at least one reference expression profile of the at least one gene, where  
 CC the patient has a solid tumour, and each of the gene is differentially  
 CC expressed in peripheral blood mononuclear cells (PBMCs) of a first class  
 CC of patients as compared to PBMCs of a second class of patients, where  
 CC both the first and second classes of patients have the solid tumour, and  
 CC each of the first and second classes is a subcluster formed by an  
 CC unsupervised clustering analysis of gene expression profiles in PBMCs of  
 CC a population of patients who have the solid tumour, and where the  
 CC majority of the first class of patients has a first clinical outcome, and  
 CC the majority of the second class of patients has a second clinical  
 CC outcome. Also described are: a system comprising (i) a memory of a  
 CC storage medium including data that represent an expression profile of at  
 CC least one gene in a peripheral blood sample of a patient who has a solid  
 CC tumour, (ii) at least another storage medium including data that  
 CC represent at least one reference expression profile of the gene, (iii) a  
 CC program capable of comparing the expression profile to the reference  
 CC expression profile, and (iv) a processor capable of executing the  
 CC program, where expression levels of the gene in peripheral blood  
 CC mononuclear cells of patients who have the solid tumour correlate with  
 CC clinical outcomes of the patients; and a nucleic acid or protein array  
 CC comprising concentrated probes for solid tumour prognosis genes, where  
 CC PBMCs of a first class of patients as compared to PBMCs of a second class  
 CC of patients, where both the first and second classes of patients have a  
 CC solid tumour, and where the first class of patients has a first clinical  
 CC outcome, and the second class of patients has a second clinical outcome.  
 CC The method, system, and array are useful for prognosing and treating  
 CC solid tumours. This sequence represents a solid tumour prognosis gene of  
 CC the invention. Note: The sequence data for this patent did not form part  
 CC of the printed specification, but was obtained in electronic format  
 CC directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences.

 PT Evaluating the progression of cancer of a patient who is afflicted with  
 PT an adenocarcinoma comprises comparing the levels of expression of one or  
 PT several marker genes in both patient and control samples.  
 PS  
 PS Claim 1; SEQ ID NO 99; 334bp; English.  
 XX  
 XX This invention relates to a novel method for evaluating the progression  
 CC of cancer in a patient afflicted with an adenocarcinoma. Specifically, it  
 CC refers to a method that compares the levels of expression of one or  
 CC several marker genes given in the specification in both a patient sample  
 CC and a sample from a control subject afflicted with an adenocarcinoma  
 CC which did not recur within 5 years following surgical removal of the  
 CC tumor. The present invention describes that a significant difference  
 CC between the expression levels of the marker genes in both samples is an  
 CC indication that the patient carries the risk of cancer progression.  
 CC Accordingly, it further provides methods useful in the preparation of  
 CC drug compositions used for the inhibition of adenocarcinomas and in  
 CC particular for the treatment of colorectal cancer. As such, these  
 CC compositions exhibit cytostatic activity. This polynucleotide sequence is  
 CC a human marker gene used to evaluate cancer progression, given in an  
 CC exemplification of the invention.

 PT New human genome-derived single exon nucleic acid probes useful for human  
 PT gene expression analysis, for identifying or characterizing alternative  
 PT splicing events, for assessing genomic alterations or as tools for  
 PT surveying tissues.  
 PS  
 PS Claim 15; SEQ ID NO 13425; 80bp; English.  
 XX  
 XX The invention relates to a nucleic acid probe for measuring human gene  
 CC expression, comprising any of the 27,400 fully defined nucleotide  
 CC sequences in the specification, or their complements or fragments, and  
 CC encoding at least 8 amino acids of any of the 688 amino acid sequences  
 CC fully defined in the specification. The probe is a single exon probe that  
 CC hybridises under high stringency conditions to a nucleic acid molecule  
 CC expressed in human cells or tissues. Also included are a spatially-  
 CC addressable set of single exon nucleic acid probes for measuring human  
 CC gene expression (comprising a plurality of single exon nucleic acid  
 CC probes cited above, where each of the plurality of probes is separately  
 CC and addressably isolatable or amplifiable from the plurality), a single  
 CC exon microarray for measuring human gene expression, a method of  
 CC measuring human gene expression, a vector comprising the single exon  
 CC probe cited above, an ORF-encoded peptide comprising at least 8  
 CC contiguous amino acids of any of the above-mentioned amino acid  
 CC sequences (optionally with conservative amino acid substitutions), an  
 CC isolated antibody that binds specifically to a peptide cited above,  
 CC methods of selling and/or licensing single exon probes or microarrays to  
 CC a customer desiring to measure gene expression, a method of providing  
 CC human gene expression data by subcription, and a computer-readable  
 CC storage medium which contains a database having a plurality of records  
 CC (each record including data on the expression of a single exon probe  
 CC cited above. The probe, methods and apparatus are useful in gene  
 CC expression analysis. The probes may be used as tools for surveying  
 CC tissues to detect the presence of expressed messages that contain their  
 CC specific exon, or in constructing genome-derived single exon microarrays.  
 CC In addition, the probes are used in identifying and characterising  
 CC alternative splicing events, in detecting and characterising gross  
 CC alterations in the genomic locus that includes their exon, in assessing  
 CC smaller genomic alterations, in priming the synthesis of nucleic acids,  
 CC or in expressing the ORF-encoded peptide. The present sequence is a human  
 CC single exon probe of the invention. Note: The sequence data for this  
 CC patent did not form part of the printed specification, but was obtained  
 CC in electronic format directly from USPTO at  
 CC seqdata.uspto.gov/sequence.html?docID=20030194704

PT New isolated nucleic acid molecule that encodes a plant protein or its  
PT fragment, useful for isolating a variety of agronomically significant  
PT genes associated with plant growth, quality or yield, and as molecular  
PT tags to map genes.  
XX  
PS Claim 1; SEQ ID NO 15408; 34pp; English.  
XX  
CC The invention relates to 17880 cotton expressed sequence tags (ESTs;  
CC ACN45220-ACN63099). The ESTs were isolated from cDNA libraries generated  
CC from primed or non-primed seeds from variety DP50B, mature seeds from  
CC variety Coker 312 Boswell 96 Field, and androecium tissue, gymnocium  
CC tissue, developing fibres, carpel walls and sepra from variety  
CC Nucleon33B. The invention also relates to substantially purified  
CC proteins or their fragments encoded by nucleic acid molecules of the  
CC invention, and to transformed plants having a nucleic acid construct  
CC comprising a nucleic acid of the invention. The cotton ESTs are useful as  
CC molecular tags to isolate genetic regions, to isolate genes, to map  
CC genes, to determine gene function and to determining whether genes are  
CC members of a particular gene family. The nucleic acid molecules may be  
CC used for isolating a variety of agronomically significant genes  
CC associated with plant growth, quality, yield, and could also serve as  
CC links in metabolic and catabolic pathways. The nucleic acid molecules are  
CC also useful for identifying genes important in initiating and maintaining  
CC seed germination or that may be used to mitigate stresses encountered  
CC during seed germination. The ESTs additionally enable the acquisition of  
CC promoters and cis-regulatory elements which will be useful to express  
CC agronomically significant genes in these tissues and/or other tissues,  
CC and also permits the acquisition of molecular markers useful in breeding  
CC schemes, genetic and molecular mapping, and in cloning of agronomically  
CC significant genes. The nucleic acid molecules are further useful for  
CC detecting the expression level or pattern of a protein or mRNA and for  
CC detecting the presence or quantity of a protein by tissue printing. The  
CC present sequence represents a specifically claimed EST isolated from a  
CC cotton variety Nucleon33B gymnocium tissue cDNA library (LIB3829). The  
CC sequence data for this patent did not form part of the printed

CC specification, but was obtained in electronic format directly from the US  
CC patent office at [seqdata.uspto.gov/sequence.html?docID=US20040123340](http://seqdata.uspto.gov/sequence.html?docID=US20040123340)

XX  
CC This invention relates to novel methods for diagnosing and monitoring  
CC autoimmune and chronic inflammatory diseases. Specifically, it refers to  
CC the identification of genes that have a clinical utility as diagnostic  
CC tools for the management of, in particular, patients with systemic lupus  
CC erythematosus (SLE) or rheumatoid arthritis (RA). Accordingly, the  
CC present invention describes a method for determining the levels of  
CC multiple differentially expressed genes of a patient, in a concerted  
CC manner, in order to achieve an improved diagnostic assay with sensitivity  
CC and specificity for the disease in question. As such, these genes are  
CC useful for the diagnosis of various other inflammatory disorders  
CC including cholecystitis, Sjogren's disease, CREST syndrome, scleroderma,  
CC ankylosing spondylitis, ulcerative colitis, primary biliary sclerosing  
CC cholangitis, appendicitis, diverticulitis, and primary biliary sclerosing  
CC This polynucleotide is a DNA sequence representing human mRNA that is  
CC differentially expressed in patients with SLE, used in an exemplification  
CC of the invention.

PT New isolated NOVX polypeptides and polynucleotides, useful for  
PT preventing, diagnosing or treating NOVX-associated disorders, e.g.  
PT osteoarthritis, obesity, atherosclerosis, cancer, Parkinson's disease,  
PT asthma, or infections.

PS Claim 20; SEQ ID NO 61; 282pp; English.  
XX This invention relates to a novel nucleic acid, and encoded polypeptides  
XX thereof, which have properties related to the stimulation of biochemical  
XX or physiological responses in a cell, tissue, organ or organism.  
XX Specifically, it refers to the use of biologically active fragments for  
XX diagnostic and prognostic assays and furthermore in the treatment of  
XX diverse pathological conditions. The present invention describes novel  
XX human and murine NOVX proteins, as well as methods to modulate their  
XX expression using antisense oligos, ribozymes and peptide nucleic acids.  
XX The polypeptides, nucleic acid molecules and antibodies are useful in the  
XX manufacture of a medicament for treating metabolic disorders, diabetes,  
XX anorexia, cancer, cardiovascular, infectious, neurodegenerative, immune

CC and haematopoietic diseases as well as various dyslipidaemias.  
 CC Accordingly, these molecules have many activities including anorectic,  
 CC vincidine, nootropic, antiinflammatory, neuroprotective, antilipase,  
 CC anabolic and cardiant. Furthermore, they are useful in screening assays  
 CC to identify small molecules that modulate or inhibit, for example,  
 CC neurogenesis, wound healing and angiogenesis. The nucleic acids are also  
 CC used as in chromosome mapping, tissue typing, preventive medicine and  
 CC pharmacogenomics. This polynucleotide is a murine NOVX cDNA of the  
 CC invention.

PT Novel isolated nucleic acid molecules (markers) overexpressed in ovarian  
PT cancer cells as compared to their normal non-cancerous ovarian cells are  
PT used to characterize stage, grade, histological type of ovarian cancer.  
XX  
PS Disclosure; SEQ ID NO 19185; 106pp; English.  
XX  
XX The invention relates to nucleic acid markers which are overexpressed in  
CC ovarian cancer cells as compared to their expression in normal (i.e. non-  
CC cancerous) ovarian cells. The invention also relates to polypeptides  
CC encoded by the markers, antibodies that selectively bind to the  
CC polypeptides, a method of inhibiting ovarian cancer in a patient at risk  
CC of developing ovarian cancer involving inhibiting expression of a gene  
CC corresponding to a marker of the invention and a method of treating a  
CC patient afflicted with ovarian cancer comprising providing to cells of  
CC the patient an antisense oligonucleotide complementary to a marker of the  
CC invention. The markers are useful for assessing if a patient is afflicted  
CC with ovarian cancer, which involves comparing the level of expression of  
CC a marker in a patient sample and a normal level of expression of the  
CC marker in a control non-ovarian cancer sample. A difference between the  
CC expression levels indicates ovarian cancer. The level of expression of a  
CC marker corresponds to a secreted protein or to a transcribed

CC polynucleotide or its portion. The level of expression of the marker is  
CC assessed by detecting the presence in the sample, a protein or protein  
CC fragment corresponding to the marker. The presence of protein or protein  
CC fragment detected using an antibody that specifically binds with the  
CC protein or protein fragment. Alternatively, the level of expression of  
CC the marker is assessed by detecting the presence of a transcribed  
CC polynucleotide which anneals with the marker or anneals with a portion of  
CC the polynucleotide comprising the marker, under stringent conditions. The  
CC marker is also used for monitoring the progression of ovarian cancer in a  
CC patient which involves detecting expression of the marker in a patient  
CC sample at a first point in time, repeating the method at a subsequent  
CC time and comparing the level of expression. The method is carried out  
CC using an ovarian tissue sample. A composition comprising a marker,  
CC polypeptide or antibody of the invention is used to treat ovarian cancer.  
CC This sequence represents a human ovarian cancer DNA marker of the  
CC invention. Note: The sequence data for this patent did not form part of  
CC the printed specification, but was obtained in electronic format directly  
CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences.

PT New stress-responsive nucleic acid, useful for altering the  
PT responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold  
PT stress, salt stress or osmotic stress.  
XX  
PS Claim 48; SEQ ID NO 15625; 89pp; English.  
XX  
XX The invention relates to novel abiotic stress responsive polynucleotides  
CC and polypeptides. Also disclosed are vectors, expression cassettes, host  
CC cells, and plants containing such polynucleotides. Also disclosed are  
CC methods for using the polynucleotides and polypeptides to alter the

CC responsiveness of a plant to abiotic stress. The invention is useful in  
CC agriculture. The nucleic acid is useful for determining whether a test  
CC plant has been exposed to an abiotic stress condition. It is also useful  
CC for selecting an agent that alters abiotic stress regulated  
CC polynucleotide expression in a plant cell, and to identify a homolog or  
CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid  
CC molecule and the polypeptide encoded by it are useful in altering the  
CC responsiveness of a plant to an abiotic stress, such as cold stress, salt  
CC stress, osmotic stress or any of their combinations. The present sequence  
CC is used in the exemplification of the invention

XX PT New rice promoter, useful for manipulating crop plants to alter or  
XX PT improve phenotypic characteristics, e.g. produce large quantities of oil  
XX PT or proteins, resistance to insecticides, virus or fungi, stress tolerance  
XX PT or high nutritional value.

PS Claim 44; SEQ ID NO 2001; 230bp; English.

XX The invention relates to plant nucleotide sequences that direct seed-,  
XX leaf- and/or stem-, panicle-, root- or pollen-specific or -preferential  
XX or constitutive transcription of an operatively linked nucleic acid  
XX segment. The invention also relates to a method for augmenting a plant  
XX genome and a method of identifying a gene, where its expression is  
XX altered in the seed, leaf, stem, panicle, pollen, root or is constitutive  
XX in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower,  
XX canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley,  
XX sorghum, rice or wheat. The polynucleotides and the polypeptides they  
XX encode are useful for manipulating crop plants to alter or improve  
XX phenotypic characteristics, to produce large quantities of oil or  
XX proteins, to incur resistance to insecticides, viruses or fungi, and to  
XX incur stress tolerance (e.g. salt, cold or drought) to ensure the plants  
XX have a high nutritional value with reduced apical dominance or dwarfism,  
XX early flowering or altered metabolic pathways. This sequence represents a  
XX plant nucleic acid of the invention. Note: The sequence data for this  
XX patent did not form part of the printed specification but was obtained in  
XX electronic format directly from USPTO at [seqdata.uspto.gov/sequence.html](http://seqdata.uspto.gov/sequence.html).

XX  
XX New rice promoter; useful for manipulating crop plants to alter or  
PT improve phenotypic characteristics, e.g. produce large quantities of oil  
PT or proteins, resistance to insecticides, virus or fungi, stress tolerance  
PT or high nutritional value.  
XX  
PS Claim 25; SEQ ID NO 1194; 230bp; English.  
XX  
XX The invention relates to plant nucleotide sequences that direct seed-,  
CC leaf- and/or stem-, panicle-, root- or pollen-specific or -preferential

CC or constitutive transcription of an operatively linked nucleic acid  
CC segment. The invention also relates to a method for augmenting a plant  
CC genome and a method of identifying a gene, where its expression is  
CC altered in the seed, leaf, stem, panicle, pollen, root or is constitutive  
CC in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower,  
CC canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley,  
CC sorghum, rice or wheat. The polynucleotides and the polypeptides they  
CC encode are useful for manipulating crop plants to alter or improve  
CC phenotypic characteristics, to produce large quantities of oil or  
CC proteins, to incur resistance to insecticides, viruses or fungi, and to  
CC incur stress tolerance (e.g. salt, cold or drought) to ensure the plants  
CC have a high nutritional value with reduced apical dominance or dwarfism,  
CC early flowering or altered metabolic pathways. This sequence represents a  
CC plant nucleic acid of the invention. Note: The sequence data for this  
CC patent did not form part of the printed specification but was obtained in  
CC electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.

XX  
XX Novel isolated polypeptide associated with breast cancer; useful for  
PT detecting presence of polypeptide in sample, as a marker for breast  
PT cancer.  
XX  
XX Disclosure; SEQ ID NO 12773; 36bp; English.  
XX  
XX The invention relates to an isolated polypeptide (I) associated with  
CC breast cancer which is encoded by a nucleic acid molecule comprising a  
CC nucleotide sequence (SI). Further disclosed is an antibody that binds to  
CC the polypeptide of the invention. The activity of the polypeptide of the  
CC invention may be described as cytostatic. The antibody is useful for  
CC detecting the presence of (I) in a sample. Nucleic acid molecules of the  
CC invention are useful in the detection of breast tumours. (I) is useful as  
CC a marker for breast cancer and in breast cancer therapy. Sequences given  
CC in records ACN78851-ACN92934 represent nucleic acid markers associated  
CC with breast cancer. Note: The sequence listing does not form part of the  
CC specification but may be obtained in electronic format from the USPTO web

XX Prostate cancer associated gene sequences, referred to as prostate cancer  
PT antigens, useful for treatment, prevention, and diagnosis of disorders  
PT such as prostate cancer.  
XX Claim 1; Page 953; 2338pp; English.

AAFI5566 to AAFI6505 encode the human prostate cancer associated  
CC proteins, called prostate cancer antigens, given in AAB56363 to AAB57302.  
CC The prostate cancer antigens can have neuroprotective, cytosolic,  
CC cardioactive, immunomodulatory, muscular, vulnary, gastrointestinal,  
CC nephrotropic, antiinfective, gynaecological and antibacterial activities,  
CC and can be used in gene therapy. The prostate cancer antigen  
CC polynucleotides may be used for detection of prostate cancer, chromosome  
CC identification, as chromosome markers, and for numerous other diagnostic  
CC or research purposes. The prostate cancer antigens may be used to treat  
CC disorders such as neural, immune, muscular, reproductive,  
CC gastrointestinal, pulmonary, cardiovascular, renal, and proliferative  
CC disorders, wounds, and infectious diseases. AAFI6506 to AAFI6514 to  
CC AAB57303 represent sequences used in the exemplification of the present  
CC invention

XX Nucleic acids encoding polypeptides with cytokine-like activities, useful  
PT in diagnosis and gene therapy.  
PT Claim 1; Page 4670-4671; 6221pp; English.

The invention relates to polynucleotides (AAK51456-AAK51435) and the  
CC encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to  
CC cytokine, cell proliferation or cell differentiation or which may induce  
CC production of other cytokines in other cell populations. The  
CC polynucleotides and polypeptides are useful in gene therapy, vaccines or  
CC peptide therapy. The polypeptides have various cytokine-like activities,  
CC e.g. stem cell growth factor activity, haematopoiesis regulating  
CC activity, tissue growth factor activity, immunomodulatory activity and  
CC activin/inhibin activity and may be useful in the diagnosis and/or  
CC treatment of cancer, leukaemia, nervous system disorders, arthritis and  
CC inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111  
CC (AAK5582) and 3666 (AAM80020) are omitted as the relevant pages from the  
CC sequence listing were missing at the time of publication

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

The library was characterised by oligonucleotide fingerprinting (ONFP) to reduce sequencing redundancy. According to the ONFP procedure, clones that display the same hybridisation matrix with a battery of 200 8mer oligonucleotides are grouped into clusters. One clone per ONFP cluster was selected for sequencing. cDNA clones and filters are distributed via Deutsches Ressourcenzentrum fuer Genomforschung GmbH (http://www.rzpd.de).

FEATURES  
source The library was characterised by oligonucleotide fingerprinting  
(ONFP) to reduce sequencing redundancy. According to the ONFP  
procedure, clones that display the same hybridisation matrix with a  
battery of 200 8mer oligonucleotides are grouped into clusters. One  
clone per ONFP cluster was selected for sequencing. cDNA clones and  
filers are distributed via Deutsches Ressourcenzentrum fuer  
Genomforschung GmbH (<http://www.rzpd.de>).

    /note="Funding: The production of ESTs submitted in this
    project was funded by USDA Grant MRI-2002-03476 entitled
    'Bovine ESTs: Focus on Female Reproduction' to RS
    Prather(Primary Investigator), E Antoniou, HA Garverick,
    JA Green, MC Lucy, RM Roberts, MF Smith and RS Youngquist.
    Genetic Source: Heifers for the project were purchased
    from Circle A Ranch, Iberia, MO
    (http://www.circlearanch.com/home.html). These heifers,
    while not registered have known Angus pedigree going back
    at least 4 generations. Samples collected: The samples
    consisted of the following: germinal vesicle-stage
    oocytes; in vitro derived embryos (2-cell, morula,
    blastocyst and nuclear transfer blastocyst); in vivo
    blastocysts and conceptuses (days 8, 14, 16 and 35); ovarian
    corpora lutea (days 3, 5, 8, 14, 16, 18 and 35); ovarian
    follicles (days 0, non-recruited, recruited, early
    selected and preovulatory); oviduct (days 0, 3 and 5);
    endometrium (days 5, 8, 14, 16, 18 and 35); and
    placenta/embryo from day 35 conceptuses. Expanded
    descriptions of how the tissues were collected can be
    found at the following URL:
    http://genome.mrc.missouri.edu/Bovine/Methods.html.
    Library construction (Standard Protocol): All procedures
    have been described in detail elsewhere (Soares et al.,
    1994; Bonaldo et al., 1996; Jiang et al., 2001). Total
    cellular RNA from each sample was isolated by using
    STRAT-60 reagent (Tel-Test, Friendswood, TX) and the
    poly(A)+ RNA was obtained by two rounds of purification
    with the Oligotex mRNA isolation kit (Qiagen) according to
    the manufacturer's instructions. The libraries were
    constructed essentially as described by the manufacturer's
    instructions provided with the SuperScript Plasmid System
    (Invitrogen, cat. no. 18248-013). Briefly, 10mg of
    poly(A)+ RNA was annealed at c37 degrees with 10mg of
    NotI-tag-d18 oligonucleotide (GGCTCGCGCGC-cag-T18)
    and reverse transcribed at c37 degrees with SuperScript II
    (Invitrogen) reverse transcriptase (Jiang et al., 2001).
    The 'tag' represents a tissue/stage-specific ten-base
    sequence identifier
    (http://genome.owa.edu/pubsoft/software.html) present in
    the oligonucleotide used to prime first-strand synthesis.
    Second strand synthesis was performed with T4 DNA
    polymerase in the presence of DNA ligase and RNase H.
    After second strand synthesis, the double-stranded cDNAs
    were ligated to SalI adapters (Invitrogen-life
    Technologies) and digested with NotI. The cDNAs were size
    selected by passage through cDNA size fractionation
    columns (Invitrogen-life technologies). The cDNAs derived
    from each developmental stage of a particular tissue were
    mixed on an equimolar basis and ligated directionally into
    the NotI and SalI sites of the pCMV-SPORT6 vector

```

(Invitrogen). After ligation of the inserts, the plasmids were electroporated into DH10B bacteria. Library construction (PCR Protocol): The amount of mRNA that was recovered from oocytes and embryos was quite limiting and was not sufficient for library production with the standard protocol. Therefore, PCR-based protocol was utilized for producing libraries from sources in which the amount of extracted mRNA was small (oocytes and embryos). Poly-A RNA was isolated by using the MicroPoly(A) Pure kit from Ambion (cat. # 1918). The mRNA was reverse transcribed with a NotI-tag-dT18 oligonucleotide and a SMART oligonucleotide (Clontech) modified to contain a SalI site to generate full-length cDNA with a sequence complementary to the SMART oligonucleotide. Sequences within the SMART and dt oligonucleotides were used as primers to amplify the cDNAs by PCR with plu turbo polymerase (Stratagene). The resulting PCR products were purified, digested with NotI and SalI and size fractionated by using Chroma Spin-1000 columns (Clontech). Purified cDNA from each PCR reaction was quantitated and mixed on an equimolar basis for ligation into the pCMV-SPORT6 vector. Preliminary Library Characterization: Randomly chosen clones from each library were analyzed by restriction digestion to determine average insert size (96 clones) and by sequencing (~4 96-well plates) to confirm library quality (e.g. the presence of short polyA+ tails, genomic DNA contamination (must be <1%), ribosomal RNA clones (must be <1%), etc.) and to provide a sequence database representing the predominant clones in each library. The clones were sequenced at the University of Missouri-Columbia DNA Core Facility. After production of the libraries, equal numbers of recombinants from each library were pooled to produce a single mixed library (mega-library) for more extensive sequencing.

Bioinformatics work was performed by GK Springer's bioinformatics group in Computer Science at the University of Missouri-Columbia. Clone Requests: Requests for clones should be made to the Director of the University of Missouri DNA Core Facility at: bovine@net.missouri.edu. Bonaldo MF, Lennon G, Soares MB. Normalization and Subtraction: Two approaches to facilitate gene discovery. Genome Res, 1996; 6:791-806. Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

 Fax: 6172580903  
 Email: mczody@broad.mit.edu  
 Primer A: No sequence submitted  
 Primer B: No sequence submitted  
 STS size: 825

Protocol:  
 23,021,928 chimpanzee whole genome shotgun reads were aligned to  
 the Human genome (NCBI  
 Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors,  
 including Clint (Pan  
 troglodytes verus), 3 other Pan troglodytes verus chimps  
 (Donald, Karlien, Yvonne), 3 Pan  
 troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps  
 of unknown origin  
 (Gon, Unknown Chimp). Common names: Pan troglodytes verus is the  
 western chimp and Pan  
 troglodytes troglodytes is the central chimp. To be included in  
 chimpanzee SNP discovery, a  
 read must be at least 500bp in length, at least 50% of its base  
 calls must have Phred  
 score >= 20, at least 30% of its base calls must satisfy  
 SNOS (30,25) (single strand NOS), the  
 base in question has Phred score >= 30, the surrounding 10 bases in  
 the read have Phred  
 score >= 25), and the read must have at least 200 bp SNOS (30,25)  
 bases. Reads not uniquely  
 placed in the genome and read pairs whose two ends were not  
 consistently placed were  
 discarded. After above filtering, NOS (30,25) standard was applied  
 to all pairs of

overlapping reads to call NOS bases and SNPs. Alignments (between  
 two reads) with less  
 than 100 NOS bases or with SNP rate > 0.01 were discarded. To  
 exclude alignment between two  
 copies of a single read, comparisons between two reads that share  
 95% of their genome  
 alignments (>=95% bases of read A and >=95% bases of read B were  
 placed at the same locus  
 of human genome) were discarded.

-----
* NOTE: This record contains 74 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

The following BAC sequence is oriented from the T7 to the SP6 end.
Upstream BAC (overlapping the T7 end) : R-338B12
Downstream BAC (overlapping the SP6 end) : R-611H21 (AC=AL513143)
----- Finishing boundaries
FINISHED SEGMENT STARTS AT BASE 13680
FINISHED SEGMENT ENDS AT BASE 163783
----- Summary Statistics
Assembly program: Phrap; version 2.0
Quality coverage: 13.66x in Q20 bases; sum-of-contigs

Range : bases
0 - 9 : 6
10 - 19 : 11
20 - 29 : 99
30 - 39 : 2479
40 - 49 : 10651
50 - 59 : 7641
60 - 69 : 12564
70 - 79 : 34298
80 - 89 : 96035
90 - 99 : 96035

```

Percentage of bases with a quality value >= 40 : 99 %.

Rat Genome Sequencing Consortium.  
Direct Submission  
Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On May 13, 2003 this sequence version replaced gi:23664651.  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

 Primer A: No sequence submitted  
 Primer B: No sequence submitted  
 STS size: 527  
 Protocol:  
 WGS-discovery (WGS):  
 Paired-end low-coverage whole genome shotgun reads were generated from 9 breeds  
 (German Shepherd, Rotweiler, Bedlington Terrier, Beagle, Labrador Retriever, English Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese Water Dog -100,000 each)  
 and five other canids (Chinese, Alaskan, Indian and Spanish Gray Wolf as well as the

Californian Coyote).  
 The WGS reads were placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSANA-SNP. 863872 reads were annotated as STSs and 485941 SNPs were annotated with alleles from the boxer and the breed or canid from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%.  
 WGS-discovery (WGA) of Boxer/Poodle SNPs:  
 A second set of SNPs was generated using a similar methodology except that the contigs from the 1.5x poodle assembly (Kirkness 2003) were used instead of WGS reads. Since this sequence lacked base quality scores, arbitrary quality scores of pined 40 were assigned before the poodle sequence was placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSANA-SNP. 1637780 SNPs were annotated with alleles from the boxer and the poodle. The validation rate for these SNPs was estimated at approximately TBD%.  
 Internal-WGA-discovery (I-WGA):  
 A third set of SNPs were discovered by comparing reads in the WGA assembly. SNPs were defined as mismatch positions that had a base quality of >= 30 on both reads in a region that aligned without gaps, and with at most one additional mismatch in the ten flanking bases. For each allele, at least one additional read had to confirm it. 731476 SNPs were annotated with alleles between the two boxer alleles. The validation rate for these SNPs was estimated at approximately TBD%.

Institute, Hinxton, Cambridge CB10 1SA, England and Department of  
Genetics, Washington University, St. Louis, MO 63110, USA. E-mail:  
worm@sanger.ac.uk  
JOURNAL  
COMMENT  
Coding sequences below are predicted from computer analysis, using  
predictions from GeneFinder (P. Green, U. Washington), and other  
available information.  
Current sequence finishing criteria for the C. elegans genome  
sequencing consortium are that all bases are either sequenced  
unambiguously on both strands, or on a single strand with both a  
dye primer and dye terminator reaction, from distinct subclones.  
Exceptions are indicated by an explicit note.  
IMPORTANT: This sequence is NOT necessarily the entire insert of  
the specified clone. It may be shorter because we only sequence  
overlapping sections once, or longer because we arrange for a small  
overlap between neighbouring submissions.  
For a graphical representation of this sequence and its analysis  
see: - [http://www.wormbase.org/perl/ace/elegans/seq/sequence?](http://www.wormbase.org/perl/ace/elegans/seq/sequence?name=Y10666G;class=Sequence)  
name=Y10666G;class=Sequence  
IMPORTANT: This sequence is not the entire insert of clone Y10666G.  
It may be shorter because we only sequence overlapping sections  
once, or longer because we arrange for a small overlap between  
neighbouring submissions.  
The true left end of clone ZC434 is at 10139 in this sequence. The  
true right end of clone T20F10 is at 104 in this sequence. The  
start of this sequence (1..104) overlaps with the end of sequence  
Z81594.  
The end of this sequence (20139..20244) overlaps with the start of  
sequence Z75714.

COMMENT  
Address for correspondence: kaos@kazusa.or.jp  
For the latest information on annotation of this clone, please see  
http://www.kazusa.or.jp/kaos/cgi-bin/agd\_graph.cgi?c=MCP4  
Genes with similarity to proteins in the databases are described in  
'product' or 'note' qualifiers. Genes that have no significant  
protein similarity are described as 'unknown protein'.  
The software programs used to predict genes include: Grail  
(Informatics Group, Oak Ridge National Laboratory,  
http://combio.ornl.gov/Grail-1.3/),  
GENSCAN (Chris Burge, MIT, http://CCR-081.mit.edu/GENSCAN.html),  
NetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of  
Denmark, http://www.cbs.dtu.dk/services/NetGene2/) and  
SplicePredictor (Volker Brendel, Stanford University,  
http://gremli.ni.zool.laebate.edu/cgi-bin/sp.cgi).  
Genes encoding tRNAs are predicted by tRNAscan-SE  
(Sean Eddy, Washington University School of Medicine, St. Louis,  
http://genome.wustl.edu/eddy/tRNAscan-SE/).  
This sequence may not be the entire insert of this clone. It may be  
shorter because we remove overlaps between neighboring submissions.  
The 5' clone is NM17 and the 3' clone is MD16.

NOTICE: This sequence may not be the entire insert of this clone.

It may be shorter because we only sequence overlapping sections

once, or longer because we provide a small overlap between

neighboring submissions.

COMMENT     On Nov 16, 2001 this sequence version replaced gi:15590941.
            The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Bm., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WormPeP; Information
on the WormPeP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
Group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr1
RP4-685N8 is from the library RPCI-4 constructed by the group of
Pieter de Jong. For further details see

-----

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (l.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.

## Project Information

Center project name: L12306

Center clone name: 866\_K\_22

NOTE: This record contains 85 individual  
sequencing reads that have not been assembled into  
contigs. Runs of N are used to separate the reads  
and the order in which they appear is completely  
arbitrary. Low-pass sequence sampling is useful for  
identifying clones that may be gene-rich and allows  
overlap relationships among clones to be deduced.  
However, it should not be assumed that this clone  
will be sequenced to completion. In the event that  
the record is updated, the accession number will  
be preserved.

-----Summary Statistics
Sequencing vector: Plasmid;
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 71426 bases at least Q40
Consensus quality: 74385 bases at least Q30
Consensus quality: 76736 bases at least Q20
Estimated insert size: 91774; sum-of-contigs estimation
Quality coverage: 1x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_drift_data.html).
* NOTE: This is a "working draft" sequence. It currently
* consists of 16 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 4341: contig of 4341 bp in length
* 4342 4441: gap of unknown length
* 4442 6717: contig of 2276 bp in length

-----  
\* NOTE: This record contains 84 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

Submitted (17-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegase@sanger.ac.uk
Clone request: clonerequest@sanger.ac.uk
On Nov 8, 2000 this sequence version replaced GI:11096501.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 13, constructed by the Sanger Centre Chromosome 13
Mapping Group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr13
Rpl1-384H3 is from the library RPl1-11.2 constructed by the group
of Pieter de Jong. For further details see

-----  
 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

CC The present invention relates to an oligonucleotide of 20-40 nucleotides  
CC that specifically hybridizes to a sequence contained in a Bacillus  
CC anthracis target sequence. The methods and compositions of the present  
CC invention are useful for detecting the presence of Bacillus anthracis  
CC nucleic acid in a sample, in particular for detecting cutaneous and  
CC respiratory anthrax infections. Two synthetic genetic target sequences,  
CC derived from pagA and capB gene sequences, were synthesized to provide  
CC known standards for testing oligonucleotides for detection of the genes  
CC carried by the plasmids PX01 and PX02, without requiring handling of  
CC virulent Bacillus anthracis. The present sequence represents a capB  
CC target sequence.

 PT Novel Arabidopsis thaliana nucleic acid useful for constructing a  
 PT transgenic plant with enhanced disease resistance and enhanced traits of  
 PT interest, as probes, and in diagnosis and screening purposes.  
 XX  
 PS Claim 1; Page 204; 277pp; English.  
 XX  
 CC The invention relates to Arabidopsis thaliana nucleic acid sequences. The  
 CC DNA sequences and the polypeptides they encode are useful for identifying  
 CC homologous or related genes, for producing compositions that modulate the  
 CC expression or function of the polypeptides, for mapping functional  
 CC regions of the protein, in diagnosis, for studying associated  
 CC physiological pathways, for genetic manipulation of cells, preferably  
 CC plant cells, in screening assays of various plant strains to determine  
 CC the strains that are capable of withstanding a particular disease or  
 CC environmental stress, for enhancing or inhibiting production of  
 CC biosynthetic products in plants and to create genetically modified and  
 CC transgenic organisms, such as plant cells and plants. Transgenic plants  
 CC are useful for introducing or improving disease resistance and stress  
 CC tolerance in plants, screening biologically active agents, such as  
 CC fungicides and insecticides, and for identifying factors involved in  
 CC biosynthetic pathways of nutritional, commercial or medicinal value.  
 CC Sequences ABX60655-ABX61554 represent Arabidopsis thaliana  
 CC polynucleotides of the invention

PT Identifying a stress condition to which a plant cell has been exposed and  
PT producing plants with increased tolerance to these abiotic stresses.  
XX  
PS Claim 144; SEQ ID NO 37; 577pp + Sequence Listing; English.  
XX  
CC The invention relates to identifying a stress condition to which a plant  
CC cell has been exposed, comprising: (a) contacting nucleic acid  
CC representative of expressed polynucleotides in the plant cell with an  
CC array or probes representative of the plant cell genome; and (b)  
CC characterizing a profile of expressed polynucleotides in the plant cell  
CC characteristic of a stress response. The method is useful in the  
CC production of transgenic plants, cells and seeds and in producing plants  
CC with increased tolerance to abiotic stress. The present sequence is that  
CC of an Arabidopsis thaliana stress regulated gene (AB212196-AB217574) used  
CC in methods of the invention. Note: The sequence data for this patent is  
CC not represented in the printed specification but is based on sequence  
CC information supplied to Derwent by the European Patent Office

PT Novel GTP-Rho binding protein 2 and nucleic acids encoding the protein,  
PT useful for the manufacture of a medicament for treating a disease  
PT associated with altered expression or activity of human GRBP2 protein.  
XX

PS Example 4; Page 63; 101pp; English.  
XX  
CC The invention relates to an isolated GTP-Rho binding protein 2 (GRBP2)  
CC polypeptide or a fragment of at least 6 amino acids or a sequence in  
CC which at least 95% of deviations from GRBP2 sequences are conservative  
CC substitutions. Also included are an isolated nucleic acid (GRBP2 NA)  
CC encoding GRBP2 comprising the full length cDNA or cDS, fragments or  
CC variants, GRBP2 vectors, host cells, antibodies, transgenic non-human  
CC animals modified to contain GRBP2 NA (or unable to express the endogenous  
CC orthologue of GRBP2), diagnosing a disease caused by a mutation in human  
CC GRBP2 or altered expression of GRBP2, anti-agonists of GRBP2, GRBP2  
CC microarrays, fusion proteins and screening for agents that modulate the  
CC expression of GRBP2 NA. GRBP2 is useful for identifying binding partners  
CC of GRBP2. GRBP2 NA and Ab are useful in therapy and in the  
CC manufacture of a medicament for the treatment or prevention of a disorder  
CC associated with increased or decreased expression or activity of human  
CC GRBP2 (e.g. tumour, liposarcoma, ichthyosis congenita III and benign  
CC familial infantile convulsion, all associated with the chromosomal  
CC location of GRBP2, 19q12). GRBP2 is useful as a standard in immunoassay  
CC specific for the protein, to be used in a therapeutic agent, as  
CC vaccines, to be and as antigens (e.g. for epitope mapping) or immunogens  
CC (e.g. for raising antibodies. GRBP2 NA is useful as hybridisation probes,  
CC to prime synthesis of nucleic acids, to prime first strand cDNA sequence  
CC on an mRNA template, and to drive in vivo expression of the proteins. The  
CC vector is useful for shuttling GRBP2 NA between host cells derived from  
CC disparate organisms, for inserting GRBP2 NA into host cell chromosome,  
CC for expressing sense or antisense RNA transcripts of GRBP2 NA in vitro or  
CC within a host cell, and for expressing GRBP2 alone or as fusions to  
CC heterologous polypeptides. The antibody is useful as an analytical  
CC reagent for detection and quantification of GRBP2 and as an immuno  
CC therapeutic agent and is useful for flow cytometric detection, for  
CC scanning laser cytometric detection, or for fluorescent immunoassay. The  
CC present sequence is a single exon probe for GRBP2

PT New isolated cancer-associated polynucleotides and polypeptides useful
PT for diagnosing, preventing or treating cancers, especially lymphoma and
PT leukemia, or in screening for agents that modulate cancer.
XX
PS claim 16; seqid 650; 310p; English.
XX
XX The invention relates to an isolated nucleic acid comprising at least 10
CC contiguous nucleotides of any of the 233 polynucleotide sequences given
CC in the specification, or its complement. The nucleic acids encode cancer-
CC associated proteins. Also included are an expression vector comprising
CC the isolated nucleic acid cited above, a host cell comprising the above
CC recombinant nucleic acid or expression vector, a microarray for detecting
CC a cancer-associated (CA) nucleic acid comprising at least one probe
CC comprising at least 10 contiguous nucleotides of any of the above-
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC an open reading frame of a CA sequence selected from any of the 95
CC polynucleotide sequences as mentioned in the specification, or its
CC complement), an isolated antibody, (or its antigen binding fragment) that
CC binds to the above polypeptide, a hybridoma that produces the above
CC monoclonal antibody, a pharmaceutical composition comprising the above
CC antibody and a pharmaceutical excipient, a kit for detecting cancer
CC cells(comprising the antibody cited above, methods for diagnosing cancer
CC or for detecting the presence or absence of cancer cells in an
CC individual, a method for inhibiting growth of cancer cells in an
CC individual, a method for delivering a therapeutic agent to cancer cells
CC in an individual, an electronic library comprising the above
```

```
CC polynucleotide or polypeptide (or their fragments), methods of screening
CC for anticancer activity or for a bioactive agent capable of modulating
CC the activity of a CA protein (CAP), methods for detecting cancer
CC associated with expression of a polypeptide in a test cell sample, a
CC method for treating cancers and a method for inhibiting the expression of
CC CA gene in a cell. The composition and methods are useful for detecting,
CC diagnosing, preventing and treating cancers, especially lymphoma and
CC leukemia. These may also be used in screening for agents that modulate
CC cancer. The present sequence is a human CAP genomic sequence. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

XX
XX Disclousure; Page 5; 53pp; English.
XX
XX The present sequence is a forward primer for the pACYC184 plasmid origin
XX of replication (p15A ori). It includes an EcoRI site. The forward primer
XX and a reverse primer (see ABZ70625) containing an Hinarm site were used
XX to introduce random mutations into the p15A ori sequence. The 1.5 kb PCR
XX product was used with pACYC184 to create a plasmid library, which was
XX used to transform Escherichia coli BL21(DE3) cells. Transformed colonies
XX were screened for an operationally enhanced p15A ori, and plasmid pECT-
XX 073 was isolated, which has a copy number in E. coli BL21(DE3) about 4.47
XX -fold higher than that of pACYC184. Sequencing of the p15A ori of pECT-
XX 073 (see ABZ70621) revealed 10 base substitutions compared with the
XX native sequence. The mutated (enhanced) p15A ori sequence can be used to
XX convert a low copy number plasmid to a high copy number plasmid useful
XX for more efficient cloning, DNA and RNA purification, protein expression
XX and co-expression

XX Selecting first and second molecules according to their interaction
XX
```

```
PT comprises allowing the first and second molecules to interact such that a
PT complex comprising each of the first and second molecules in multivalent
PT form is generated.
XX
XX Example; Page 28; 60pp; English.
XX
XX The invention relates to a novel selection avidity capture (SAC) method
XX for selecting first and second molecules according to an interaction
XX between the first and second molecules. This method comprises allowing
XX the first and second molecules to interact, such that a complex of the
XX first and second molecules in multivalent form is generated. The novel
XX method is useful for selecting first and second molecules according to
XX their interaction, thus identifying interactions between a wide variety
XX of different types of molecules, e.g. binding or association through
XX covalent binding, ionic binding, hydrogen-binding, Van der Waal's
XX binding, or other types of reversible or irreversible association. This
XX polynucleotide sequence represents a PCR primer relating to the SAC
XX method of the invention

XX
XX New nucleic acid that is a 5' expressed sequence tag (5' EST) for
XX obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
XX diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX
XX Claim 1; SEQ ID NO 9165; 71pp + Sequence listing; English.
XX
XX The present sequence is one of a large number of 5' ESTs derived from
XX mRNAs encoding secreted proteins. No ORF has yet been conclusively
XX identified within the present sequence. The 5' ESTs were prepared from
XX total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
XX sequences usually correspond mainly to the 3' untranslated region (UTR)
XX of the mRNA because they are often obtained from oligo-dT primed cDNA
XX libraries. Such ESTs are not well suited for isolating cDNA sequences
XX derived from the 5' ends of mRNAs and even in those cases where longer
XX
```

CC cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. CC They are used to obtain upstream regulatory sequences and to design expression and secretion vectors

XX  
XX Measuring telomerase activity, useful for tumour diagnosis and compound  
PT screening - by extending substrate primer, followed by amplification and  
PT immobilising product for detection.  
XX  
XX Example; Fig 5; 21pp; German.  
XX  
XX The present sequence is an amplification strand, which can be used in a  
CC novel method for the quantitative determination of telomerase activity by

CC PCR. The method comprises adding to a test sample a 1st primer, that  
CC serves as telomerase substrate, and nucleoside triphosphate (dNTP) and  
CC incubating to allow primer extension by the telomerase, amplifying the  
CC extension product, immobilising the amplification product (AP) on a solid  
CC phase and qualitative and/or quantitative detection of AP, where the  
CC substrate primer is preferably from the 5'-region of the long terminal  
CC repeat 2 (LTR-2) sequence of a retrovirus. The method can be used to  
CC diagnose tumours and screen compounds for effector activity.  
CC Immobilisation of AP provides a signal that is reproducibly  
CC representative of telomerase activity, eliminates the need for gel  
CC electrophoretic separation and provides high sensitivity. Radioactive  
CC labels are not required and the method can be automated for routine use.  
CC Specific detection is achieved by proper choice of hybridisation  
CC conditions, without separation of the telomerase extension product. A  
CC specific signal is generated by 1-10 cell equivalents, but for tumour  
CC analysis 10-1000 ng of tissue is usually used

XX New hepato selective and peripheral selective human insulin analogues -  
PT and their corresp. DNA, for treatment of type I and type II diabetes.  
XX  
XX Disclosure; Fig 2a; 58pp; English.  
XX  
XX The sequence given encodes amino acids 1-73 of CAT. This sequence was  
CC used in the construction of proinsulin analogues. The sequences in  
CC AAQ36996-7001 are oligonucleotides which can be combined to form a gene  
CC which codes for human proinsulin. The resulting cDNA coding for  
CC proinsulin was inserted into plasmid vector pUC19 and digested with KpnI  
CC and HindIII. This resulted in the formation of the vector pPINS. This CAT  
CC fragment was inserted into pPINS to give a plasmid which contained DNA

CC sequences which coded for amino acids 1-73 of CAT, an 8 amino acid linker  
 CC sequence and human proinsulin (see AAQ37003). This plasmid, pUC-CAT-  
 CC proinsulin, could be used in the formation of insulin analogues which may  
 CC be used in the treatment of types I and II diabetes. (Updated on 25-MAR-  
 CC 2003 to correct PN field.)

XX
XX Claim 1; SEQ ID NO 3300; 103pp; English.
XX
XX The invention relates to isolated polynucleotide (I) and polypeptide (II)
XX sequences. (I) is useful as hybridisation probes, polymerase chain
XX reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
XX and in recombinant production of (II). The polynucleotides are also used
XX in diagnostics as expressed sequence tags for identifying expressed
XX genes. (II) is useful in gene therapy techniques to restore normal
XX activity of (II) or to treat disease states involving (II). (II) is
XX useful for generating antibodies against it, detecting or quantitating a
XX polypeptide in tissue, as molecular weight markers and as a food
XX supplement. (II) and its binding partners are useful in medical imaging
XX of sites expressing (II). (I) and (II) are useful for treating disorders
XX involving aberrant protein expression or biological activity. The
XX polypeptide and polynucleotide sequences have applications in
XX diagnostics, forensics, gene mapping, identification of mutations
XX responsible for genetic disorders or other traits to assess biodiversity
XX and to produce other types of data and products dependent on DNA and
XX amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
XX coding sequences of the invention. Note: The sequence data for this
XX patent did not appear in the printed specification, but was obtained in

XX
XX Isolated nucleic acids and polypeptides, useful for preventing diagnosing
XX and treating e.g. leukemia, inflammation and immune disorders.
XX
XX Claim 1; SEQ ID NO 4651; 139pp + Sequence Listing; English.
XX
XX The invention relates to human polynucleotides (AAI79941-AAI93641) and
XX the encoded proteins (AAO00010-AAO13910) that exhibit activity relating to
XX cytokine, cell proliferation or cell differentiation or which may induce
XX production of other cytokines in other cell populations. The
XX polynucleotides and polypeptides are useful in gene therapy, vaccines or
XX peptide therapy. The polypeptides have various cytokine-like activities,
XX e.g. stem cell growth factor activity, haematopoiesis regulating
XX activity, tissue growth factor activity, immunomodulatory activity and
XX activin/inhibin activity and may be useful in the diagnosis and/or
XX treatment of cancer, leukaemia, nervous system disorders, arthritis and
XX inflammation. Note: The sequence data for this patent did not form part
XX of the printed specification, but was obtained in electronic format

PT Ribonuclease specifically cleaving hybridised RNA section - useful in  
PT genetic engineering, and in diagnosis and therapy.  
XX  
PS Example 31; Page 16; 19pp; Japanese.  
XX  
CC The present sequence was used in the development of a ribonuclease, which  
CC specifically recognises and cleaves a hybridised section of a 1st and 2nd  
CC RNA chain at the 3'-terminal of the 1st chain, or at a section located 1  
CC to 3 nucleotides from it, where at least 5 contiguous nucleotides from  
CC the 5'-terminal of the 2nd RNA chain are hybridised to the 1st RNA chain.  
CC The ribonuclease has an optimum pH of 7.0 to 7.5, an optimum temperature  
CC of 50 to 60 degrees C, a molecular weight of 100 kDa as determined by  
CC molecular sieve chromatography and an isoelectric point of 4.5 as  
CC determined by chromatofocusing. The ribonuclease can be used to  
CC specifically cleave RNA at an arbitrary site, useful in genetic  
CC engineering and diagnosis and therapy

CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping.  
CC in recombinant production of (II). The polynucleotides are also used  
CC in diagnostics as expressed sequence tags for identifying expressed  
CC genes. (I) is useful in gene therapy techniques to restore normal  
CC activity of (II) or to treat disease states involving (II). (II) is  
CC useful for generating antibodies against it, detecting or quantitating a  
CC polypeptide in tissue, as molecular weight markers and as a food  
CC supplement. (II) and its binding partners are useful in medical imaging  
CC of sites expressing (II). (I) and (II) are useful for treating disorders  
CC involving aberrant protein expression or biological activity. The  
CC polypeptide and polynucleotide sequences have applications in  
CC diagnostics, forensics, gene mapping, identification of mutations  
CC responsible for genetic disorders or other traits to assess biodiversity  
CC and to produce other types of data and products dependent on DNA and  
CC amino acid sequences. AA564197-AA594564 represent novel human diagnostic  
CC coding sequences of the invention. Note: The sequence data for this  
CC patent did not appear in the printed specification, but was obtained in  
CC electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences

XX  
PS Disclosure; Col 11-14; 14pp; English.  
XX  
SS The nucleotide sequence across and surrounding the constitutive promoter  
CC element (CPE) of the soybean CRNA methionine initiator (CRNA met1) linked  
CC to a fragment from the chloramphenicol acetyl transferase (CAT) gene in  
CC plasmid pGm/E.14. A series of plasmids with differing sites of inserted  
CC CAT gene fragments were generated (AAQ72698-700 and AAQ74277). The  
CC plasmid pGm/E.14 is generated by digesting pBLCAT3, a CAT containing  
CC plasmid, with XhoI and EcoRI to generate a 256 bp fragment from the 5'  
CC end of the CAT gene. This is placed into the XhoI and end-filled HindIII  
CC site in the CRNA-met1 coding sequence. The CAT fragment is placed in  
CC reversed orientation to the CRNA-met1. This allows expression of an  
CC antisense CAT fragment by RNA polIII. This reduces the expression of CAT  
CC by 50% in carrot protoplasts harbouring a plasmid with the CAT gene under  
CC control of the CamV 35S promoter. The system allows antisense (AS) genes  
CC under the control of the CPE to be expressed in all plant tissues. The AS  
CC gene should be able to suppress specific gene expression and thus  
CC inactivate a wide variety of genes

 DR  
 XX Polynucleotide and amino acid sequences identified in one or more  
 PT metabolic pathways that lead to dwarfism and stunting in plants, useful  
 PT in agriculture to create dwarf varieties of any plant species.  
 XX  
 XX Example 10; Fig 1; 717pp; English.  
 PS  
 XX The invention relates to polynucleotide and amino acid sequences  
 CC identified in one or more metabolic pathways that lead to dwarfism and  
 CC stunting in plants. Also included are vectors comprising the  
 CC polynucleotides, transgenic plants (including the seed and leaf)  
 CC transected with the polynucleotides or vectors, a process for altering  
 CC the metabolism of a plant comprising providing the above vector and a  
 CC plant, and transecting the plant with the vector under conditions such  
 CC that the metabolism of the plant is altered by expression of the isolated  
 CC nucleic acid from the vector, e.g. such that a stunting phenotype in an  
 CC industrial plant is produced and a process for the characterisation of  
 CC fractionated biological samples, comprising (a) providing one or more  
 CC fractionated biological samples, reference samples, a gas chromatography  
 CC apparatus, a mass spectroscopy apparatus or data analysis software and  
 CC (b) treating the fractionated biological samples and the reference  
 CC samples with the gas chromatography apparatus to generate chromatographic  
 CC data corresponding to the fractionated biological samples and the  
 CC reference samples, (c) treating the fractionated biological samples and  
 CC the reference samples with the mass spectroscopy apparatus to generate  
 CC spectroscopic data corresponding to the fractionated biological samples  
 CC and the reference samples and (d) processing the chromatographic and the  
 CC spectroscopic data with the data analysis software. The nucleic acid and  
 CC the vector are useful for altering the metabolism of a plant and for  
 CC stunting a plant. The nucleic acids are useful in agriculture to create  
 CC dwarf varieties of any plant species. The present sequence is a plant  
 CC EST, expressed sequence tag, isolated from a cDNA library and related to  
 CC stunting/dwarfism. (Updated on 07-AUG-2003 to correct OS field.)

 PS  
 XX An amino acid sequence of a 187 residue fusion protein encoded by pC149SP  
 CC -C is a slight modification of the sequence shown in AAQ15265. In plasmid  
 CC pC149SP-C, the 149 amino acids of CAT are joined to 35 amino acids of SP-  
 CC 5 through a linker of 3 amino acids. The SP-5 comprises 18.7% of the  
 CC total fusion. To construct pC149SP-C, a portion of the CAT segment of  
 CC pC210SP-C extending from the DdeI site at nucleotide 523 (AAQ15265) to  
 CC the EcoRI site at nucleotide 728 was removed and replaced by a set of two  
 CC complementary oligonucleotides. See also AARI5602-7, AAQ15262-63 and  
 CC AAQ15265-66. (Updated on 25-MAR-2003 to correct PA field.)

 PT New nucleic acid containing regulatory region of the smooth muscle actin  
 PT gene, useful e.g. for manipulating gene expression in smooth muscle  
 PT cells.  
 XX  
 PS Disclosure; Page 23; 44pp; German.  
 XX  
 CC This invention describes a novel nucleic acid (I) comprising: (i) at  
 CC least one functional region (Ia) from the regulatory region of the alpha-  
 CC smooth muscle actin (SMA) gene and (ii) at least one additional  
 CC functional sequence (Ib) operably linked to (Ia). The products of the  
 CC invention can be used for preparing genetically modified eukaryotic cells  
 CC or organisms, for isolation and screening of smooth muscle cells,  
 CC myofibroblasts or related cells, and for manipulation of gene expression  
 CC and/or cell function in smooth muscle cell or myofibroblasts.  
 CC particularly for gene therapy. Component (Ia) provides cell-type or  
 CC differentiation-specific expression or modulation of genes. This sequence  
 CC represents a chloramphenicol-acetyltransferase (CAT) DNA fragment which  
 CC can be used as a reporter molecule under the control of the alpha-SMA  
 CC described in the invention

XX New transposon, useful for developing a mutant strain with deletion of an  
PT optional part of the chromosome, and for identifying non-essential genes  
PT for growth of microorganisms.  
XX  
PS Claim 1; SEQ ID NO 5; 47bp; English.  
XX  
CC The present sequence is the coding sequence of the chloramphenicol  
CC resistance gene. The coding sequence was obtained by PCR and used in the  
CC construction of transposon TnRIBD ADF79367, providing a positive  
CC selectable marker. A claimed method for developing a mutant microbial  
CC strain with deletion of an optional part of the chromosome involves  
CC inserting transposon TnRIBD into an optional site, identifying the  
CC insertion site, and deleting the parts of the chromosome on the left and  
CC right hand sides of the insertion site using a transposase expression  
CC vector. A claimed method for identifying non-essential genes for growth  
CC involves constructing a new mutant strain by deleting an optional part of  
CC the genome, identifying the genes in the deleted part, and investigating  
CC the survival of the mutant strain. The methods can be used to develop  
CC novel strains of *Escherichia coli* and other microorganisms.

XX  
CC This cDNA encodes the *Escherichia coli* CAT protein. The invention  
CC provides a conjugative transfer intraorganellar expression vector  
CC containing a replication starting point functioned by organelle, a  
CC replication starting point functioned by the donor microbe, a selective  
CC marker gene functioned by organelle, a selective marker gene functioned  
CC by the donor microbe, a desired foreign gene functioned by organelle and  
CC oriT sequence required for the conjugative transfer between prokaryote  
CC and eukaryote. The vector can be conjugatively transferred from donor  
CC microbe carrying the vector to a eukaryote (which is a host cell) using  
CC tra gene and mob gene to introduce the vector to the organelle present in  
CC the eukaryote. This conjugative transfer intraorganellar expression vector  
CC can be used in the gene therapy. The CAT gene was converted to  
CC translation codon for mitochondria by site-specific mutation

PT Nucleic acid sequences are used to generate universal probes and primers  
PT which can be used to identify and detect the presence of algal, archaeal,  
PT bacterial, fungal and parasitical species in a test sample.

PS Disclosure; Page 1512; 1580pp; English.

XX The present invention describes a method for generating a repository of  
XX nucleic acids of tuf, fus, atpD and/or recA genes from which probes  
XX and/or primers are derived. The method comprises amplifying the nucleic  
XX acids of determined algal, archaeal, bacterial, fungal and parasitical  
XX species with a combination of defined primer pairs. The method can be  
XX used for producing probes and/or primers for detecting one or more  
XX related microorganisms e.g. algae, archaea, bacteria, fungi and  
XX parasites, for universal detection and for specific and ubiquitous  
XX detection and identification of an algal, archaeal, bacterial, fungal and  
XX parasitical species, genus, family and group. A nucleic acid (I) obtained  
XX using the method of the invention can be used for the universal detection  
XX of any bacterium, fungus or parasite in a sample and for the detection of  
XX at least one antimicrobial agent resistance gene or at least one toxin  
XX gene. Hexa nucleic acids are used for the specific and ubiquitous  
XX detection and for identification of Streptococcus pneumoniae. (I) can be  
XX used to design a therapeutic agent which is effective against  
XX microorganisms. Microbial species or genus or family or phylum or group  
XX which can be detected include Abiotrophia adiacens, Bordetella sp.,  
XX Corynebacterium sp., Enterobacteriaceae group, Escherichia coli,  
XX Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria  
XX gonorrhoeae and Staphylococcus sp. Using DNA based tests provides faster  
XX results than substrate specificity tests as results can be determined in  
XX an hour and improved accuracy is also achieved. AAH00010 to AAH002304  
XX represent nucleotide sequences and primers/probes which are given in the

PT Isolating intracellular antibodies able to neutralize an interaction  
PT between a known protein ligand x and a known protein ligand y inside a  
PT cell comprises selecting transformed yeast clones by inducing the  
PT expression of both ligands.

PS Disclosure; Page 55; 93pp; English.

XX This invention relates to a novel method of isolating intracellular  
XX antibodies able to neutralise an interaction between a known protein  
XX ligand x and a known protein ligand y inside a cell. The method comprises  
XX selecting transformed yeast clones by inducing the expression of both  
XX ligand x and ligand y. The method is useful for isolating intracellular  
XX antibodies able to neutralise an interaction between a known protein  
XX ligand x and a known protein ligand y inside a cell. The present sequence  
XX is that of a gene which is related to the method of the invention.

PT	Synthesizing C-terminal defective protein, involves translating 3' terminal deleted RNA obtained by performing RNA transcription using template DNA, RNA polymerase and substance capable of stopping RNA transcription.
XX	
PS	Example 1; SEQ ID NO 2; 19pp; Japanese.
XX	
CC	The invention comprises a method of synthesizing a C-terminal defective protein, the method involves obtaining 3' terminal deleted RNA through CC RNA transcription, and obtaining C-terminal defective protein by CC translating the obtained 3' terminal deleted RNA. The method of the CC invention is useful for synthesizing C-terminal defective protein, the preparing soluble protein, and for determining solubilization domain. The CC present DNA sequence represents a chloramphenicol acetyltransferase (CAT) coding sequence.

PT New isolated polynucleotide and encoded polypeptides, useful in  
 PT diagnostics, forensics, gene mapping, identification of mutations  
 PT responsible for genetic disorders or other traits and to assess  
 PT biodiversity.

PS Claim 1; SEQ ID NO 11630; 103bp; English.

XX  
 CC The invention relates to isolated polynucleotide (I) and polypeptide (II)  
 CC sequences. (I) is useful as hybridisation probes, polymerase chain  
 CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,  
 CC and in recombinant production of (II). The polynucleotides are also used  
 CC in diagnostics as expressed sequence tags for identifying expressed  
 CC genes. (I) is useful in gene therapy techniques to restore normal  
 CC activity of (II) or to treat disease states involving (II). (II) is  
 CC useful for generating antibodies against it, detecting or quantitating a  
 CC polypeptide in tissue, as molecular weight markers and as a food  
 CC supplement. (II) and its binding partners are useful in medical imaging  
 CC of sites expressing (II). (I) and (II) are useful for treating disorders  
 CC involving aberrant protein expression or biological activity. The  
 CC polypeptide and polynucleotide sequences have applications in  
 CC diagnostics, forensics, gene mapping, identification of mutations  
 CC responsible for genetic disorders or other traits to assess biodiversity  
 CC and to produce other types of data and products dependent on DNA and  
 CC amino acid sequences. AA664197-AA694564 represent novel human diagnostic  
 CC coding sequences of the invention. Note: The sequence data for this  
 CC patent did not appear in the printed specification, but was obtained in  
 CC electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

#### SUMMARIES

 The library was constructed by Claire Murphy and Dr. James McCarter at Washington University, St. Louis. Oligo(dT)-SL1 PCR based library. cDNA PCR products of size >400 nucleotides containing SL1 on the 5' end and oligo(dT) on the 3' end were non-directionally cloned into PCR11-TOPO(Invitrogen) following the Topo TA cloning protocol. Whole worm RNA was provided by Dr. Douglas Jaamer of Washington State University (djaamer@vetmed.wsu.edu).

 /tissue\_type="Roots of 8 day old 'Bragg' supernodulating  
 mutant NTS382 seedlings"  
 /dev\_stage="8 days old"  
 /lab\_host="PH10B"  
 /clone\_lib="Gm-cl080"  
 /note="Vector: pBluescript II SK+; Site 1: EcoRI; Site 2:  
 XhoI; The mRNA was isolated from roots of 8 day old  
 'Bragg' supernodulating mutant NTS382 seedlings that were  
 infected with Bradyrhizobium japonicum, strain USDA 110, 72  
 hours prior to harvest. Dr. Gary Stacey generously donated  
 the tissue. The roots were flash-frozen in liquid  
 nitrogen. Stratagene's cDNA Synthesis Kit (catalog number  
 200401) was used to synthesize the cDNA. First-strand  
 synthesis was performed with 5-methyl dCTP, hence the  
 ligated cDNA was hemimethylated. A modification of  
 Stratagene's first-strand synthesis primer was used. An  
 anchor nucleotide (V=A, C, or G) was added to the 3' end  
 of the primer (GAGAGAGAGAGAGAGACTGTCGAG(T)18V) to  
 anchor the primer at the 5' end of the poly(A) tract.  
 After second-strand synthesis, the cDNA ends were filled  
 in with cloned Pfu DNA, ligated to EcoRI adapters and  
 subsequently phosphorylated. The cDNA was then  
 precipitated and redissolved in sterile, RNase-,  
 DNase-free water. The XhoI site within the first-strand  
 synthesis primer was then restricted by digestion with  
 XhoI from Promega (40U/ul); all XhoI sites in the cDNA  
 would be protected by their hemimethylated status. The  
 cDNA constructs were size-fractionated with a 500bp  
 cutoff, using Sephacryl S-500 High Resolution (Pharmacia  
 Biotech) in a 2-mm diameter column and a bed volume of  
 approximately 1ml. The column eluent was precipitated,

redissolved, and ligated into Stratagene's pBluescript II  
 XR Pridigested vector (pBluescript II SK(+)) vector that  
 has been digested with EcoRI and XhoI, and phosphorylated  
 by Stratagene). This library was constructed in the  
 laboratory of Dr. Paul Keim and Dr. Virginia H. Corryell at  
 Northern Arizona University."

/note="Vector: pBluescript II SK+; Site 1: EcoRI; Site 2: XhoI; The Harosoy NIL was constructed and seed was provided by Dr. J. Specht, University of Nebraska (Shoemaker and Specht, 1995). The cDNA library was constructed from mRNA isolated from whole seedlings of 3 week old greenhouse grown plants. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site and a 3' anchor. EcoRI adapters were ligated to the blunt-ended cDNA fragments. Followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DH10B host cells (GibcoBRL). This library was constructed in cooperation with Dr. Paul Keim's laboratory at Northern Arizona University."

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

RESULT 1						
LOCUS	BACCPABC	3244 bp	DNA	linear	BCT 26-APR-1993	
DEFINITION	B.anthraxis encapsulation protein genes (capA, capB, and capC), complete cds.					
ACCESSION	M24150	GI:142630				
VERSION	M24150.1	GI:142630				
KEYWORDS	encapsulation protein; membrane-associated protein.					
SOURCE	Bacillus anthracis					
ORGANISM	Bacteria; Firmicutes; Bacillales; Bacillaceae; Bacillus; Bacillus cereus group.					

REFERENCE	1 (bases 1 to 3244)
AUTHORS	Makino,S., Uchida,I., Terakado,N., Sasakawa,C. and Yoshikawa,M.
TITLE	Molecular characterization and protein analysis of the cap region, which is essential for encapsulation in Bacillus anthracis
JOURNAL	J. Bacteriol. 171 (2), 722-730 (1989)
PubMed	2536679
COMMENT	Original source text: B.anthraxis (strain TB702; isolate pCAP1) DNA.

Draht entry and computer-readable sequence for [1] kindly provided by I.Uchida, 01-MAY-1989.

COMMENT
Cambridgehire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
Clone requests: clonerequest@sanger.ac.uk
On Dec 4, 2000 this sequence version replaced gi:111414669.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
Chromosome 13, constructed by the Sanger Centre Chromosome 13
Mapping Group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr13
RP11-360A9 is from the library RPCI-11.2 constructed by the group
of Pieter de Jong. For further details see
http://www.chori.org/bacpac/home.htm

-----
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.

## JOURNAL COMMENT

Submitted (19-JAN-2002) Genome Center, University of Washington,  
Box 352145, Seattle, WA 98195, USA  
On Jan 19, 2002 this sequence version replaced gi:15887335.  
----- Genome Center  
Center: University of Washington Genome Center  
Center Code: UWGC  
Web site: http://www.genome.washington.edu  
Contact: uwgchc@u.washington.edu  
Drafting Center: SC

## ----- Project Information

Center Project name: chr-1  
Center clone name: RP4-739M21 (sc0561)

## ----- Summary Statistics

Sequencing vector: plasmid; 108752; 58% of reads  
Chemistry: Dye-terminator ET; 80% of reads  
Chemistry: Dye-terminator Big Dye; 20% of reads  
Assembly program: Phrap; version 0.990319  
Consensus quality: 102531 bases at least Q40  
Consensus quality: 102599 bases at least Q30  
Insert size: 102633; sum-of-contigs  
Quality coverage: 7.2x in Q20 bases; sum-of-contigs

## ----- Overlapping Sequences:

5': Mapping in progress  
3': RP11-64N3 (UWGC:sc0365) AC069315

## ----- Sequence Quality Assessment:

This entry has been annotated with sequence quality  
estimates computed by the Phrap assembly program.  
All manually edited bases have been reduced to quality zero.  
Quality levels above 40 are expected to have less than  
1 error in 10,000 bp.  
Base-by-base quality values are not generally visible from the  
GenBank flat file format but are available as part  
of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted:  
all regions were either double-stranded or sequenced with an  
alternate chemistry or covered by high quality data (i.e., Phred  
quality >= 30); an attempt was made to resolve all sequencing  
problems, such as compressions and repeats; all regions were  
covered by at least one plasmid subclone or more than one M13  
subclone; and the assembly was confirmed by restriction digest.

## ----- Sequence Validation:

This sequence has been validated by Multiple Complete Digest  
fingerprinting. Comparison of the experimentally derived digest  
fragments with sequence-predicted fragments is given below.  
The electronically-digested sequence consists of both insert and  
vector, in order to accurately represent the entire circular BAC.  
Small fragments below a variable cutoff (approximately 400-800 bp)  
are not resolved in the fingerprint and hence do not appear  
in the table. There are no significant remaining discrepancies  
between the experimental and predicted values. Uniquely ordered  
fragments are separated by dashed lines.

 Quality coverage: 4.11 in Q20 bases; sum-of-Contigs  
 ----- NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 25 contigs. The true order of the pieces  
 \* is not known and their order in this sequence record is  
 \* arbitrary. Gaps between the contigs are represented as  
 \* runs of 'N', but the exact sizes of the gaps are unknown.  
 \* This record will be updated with the finished sequence  
 \* as soon as it is available and the accession number will  
 \* be preserved.  
 \* 1 1957: contig of 1957 bp in length  
 \* 1958 2057: gap of unknown length  
 \* 2058 4549: contig of 2492 bp in length  
 \* 4550 4649: gap of unknown length  
 \* 4650 6847: contig of 2198 bp in length  
 \* 6848 6947: gap of unknown length

## NOTICE:

This sequence was finished as follows unless otherwise noted:  
 all regions were double stranded, sequenced with an alternate  
 chemistry, or covered by high quality data (i.e., phred quality >=  
 30); an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by sequence  
 from more than one subclone; and the assembly was confirmed by

## restriction digest.

## MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Mes Warren,  
 Department of Genetics, Washington University, St. Louis MO. For  
 additional information about the map position of this sequence, see  
<http://genome.wustl.edu>

## SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male  
 donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E.,  
 Teleno, M., Cataneese, J.J. and de Jong, P.J. (1998) An improved  
 approach for construction of bacterial artificial chromosome  
 libraries. Genomics 51:1-8. The clone may be obtained either from  
 Research Genetics, Inc. (<http://www.reagen.com>) or Pieter de Jong  
 and coworkers at <http://www.chori.org>  
 VECTOR: pBACe3.6

## NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the right is RP11-294G19, 200 bp overlap;  
 the clone sequenced to the left is RP11-9509. Actual start of this  
 clone is at base position 1 of RP11-107B5; actual end is at base  
 position 159597 of RP11-107B5.

There are polymorphic base differences in the overlap between  
 RP11-107B5 and RP11-294G19.

The sequence from base position 113472 to 113490 is derived from  
 PCR product of RP11-107B5 clone DNA.

 Contact: [nisc\\_zoo@nhgri.nih.gov](mailto:nisc_zoo@nhgri.nih.gov)  
 ----- Project Information  
 Center project name: ghs  
 Center clone name: 2310J02

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

#### ----- Summary Statistics

Sequencing vector: plasmid; n/a; 100% of reads  
 Chemistry: Dye-terminator Big Dye; 100% of reads  
 Assembly program: Phrap; version 0.990319  
 Consensus quality: 197043 bases at least Q40  
 Consensus quality: 197785 bases at least Q30  
 Consensus quality: 198372 bases at least Q20  
 Insert size: 200000; agarose-fp  
 Insert size: 198724; sum-of-contigs  
 Quality coverage: 6.89x in Q20 bases; sum-of-contigs  
 Quality coverage: 6.94x in Q20 bases; sum-of-contigs

\* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 4 contigs. Gaps between the contigs  
 \* are represented as runs of N. The order of the pieces  
 \* is believed to be correct as given, however the sizes  
 \* of the gaps between them are based on estimates that have  
 \* provided by the submittor.  
 \* This sequence will be replaced  
 \* by the finished sequence as soon as it is available and  
 \* the accession number will be preserved.  
 \* 1 137567: contig of 137567 bp in length  
 \* 137568 137667: gap of unknown length  
 \* 137668 150803: contig of 13136 bp in length  
 \* 150804 195236: gap of unknown length  
 \* 195237 195336: contig of 44333 bp in length  
 \* 195337 199024: contig of 3688 bp in length.

Summary Statistics  
Center project name: H\_NH0757A13  
-----  
NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.  
  
This sequence was finished as follows unless otherwise noted:  
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.  
  
MAPPING INFORMATION:  
The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see <http://www.nhgri.nih.gov/DIR/CTB/CHR7>, send <mailto:egreen@nhgri.nih.gov>, or see <http://genome.wustl.edu/gsc>  
  
SOURCE INFORMATION:  
The RPCT-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Moon,P.Y., Zhao,B., Frengen,B., Tatemio,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (<http://bacpac.med.buffalo.edu>)  
VECTOR: pBAC3.6  
NEIGHBORING SEQUENCE INFORMATION:  
The clone sequenced to the right is GSI-259H13, 200 bp overlap; the clone sequenced to the left is CTD-324A018, 200 bp overlap. Actual start of this clone is at base position 59660 of CTD-324A018; actual end is at base position 25744 of GSI-259H13.  
  
The sequence from base position 113692 to 114784 is derived from a single plasmid subclone. Assembly in this region is supported by HindIII digest information.

 Center: Wellcome Trust Sanger Institute  
 Center code: SC  
 Web site: http://www.sanger.ac.uk  
 Contact: zfish-help@sanger.ac.uk

During sequence assembly data is compared from overlapping clones.  
 Where differences are found these are annotated as variations  
 together with a note of the overlapping clone name. Note that the  
 variation annotation may not be found in the sequence submission  
 corresponding to the overlapping clone, as we submit sequences with  
 only a small overlap as described above.  
 This sequence was finished as follows unless otherwise noted: all  
 regions were either double-stranded or sequenced with an alternate  
 chemistry or covered by high quality data (i.e., phred quality >=  
 30); an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by at least  
 one plasmid subclone or more than one M13 subclone; and the  
 assembly was confirmed by restriction digest, except on the rare  
 occasion of the clone being a YAC.  
 The following abbreviations are used to associate primary accession  
 numbers given in the feature table with their source databases:  
 Em:, EMBL; Sw:, SWISSPROT; Tr:, TrEMBL; Wp:, WormPep; Information  
 on the WormPep database can be found at

[http://www.sanger.ac.uk/Projects/C\\_elegans/wormpep](http://www.sanger.ac.uk/Projects/C_elegans/wormpep) Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see [http://www.Projects/D\\_rexio/fishmask.shtml](http://www.Projects/D_rexio/fishmask.shtml) CH211-190H2 is from a CHOR1-211 BAC library

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

#### ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base

from more than one subclone; and the assembly was confirmed by restriction digest.

**MAPPING INFORMATION:**

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

**SOURCE INFORMATION:**

The RPT-24 BAC Library has been constructed by Pieter de Jong and coworkers (<http://www.chori.org>) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at <http://www.chori.org>

**NEIGHBORING SEQUENCE INFORMATION:**

This sequence is the entire insert of the clone.

TITLE Direct Submission
JOURNAL Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
COMMENT Clone requests: clonerequest@sanger.ac.uk
On or before May 15, 2001 this sequence version replaced
GI:10989878, GI:12191378.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep
This sequence
was generated from part of bacterial clone configs of human
chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
Group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr1
Rpl1-12M5 is from the library RPCT-11.1 constructed by the group of
Pleier de Jong. For further details see
http://www.chori.org/bacpac/home.htm

-----
Draft Sequence Produced by Genome Sequencing Center, Washington
University School of Medicine, 4444 Forest Park Parkway, St. Louis,
MO 63108, USA
http://genome.wustl.edu/gsc/index.shtml
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest
except on the rare occasion of the clone being a YAC.

LOCUS AC090226 173602 bp DNA linear PRI 28-NOV-2001
DEFINITION Homo sapiens chromosome 18, clone RP11-723020, complete sequence.
ACCESSION AC090226
VERSION AC090226.3 GI:17047144
KEYWORDS HTS.
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
  Bkaryote: Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
  Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
  Hominiidae; Homo.
  1 (bases 1 to 173602)
  Homo sapiens chromosome 18, clone RP11-723020

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

XX

```

The present invention relates to an oligonucleotide of 20-40 nucleotides that specifically hybridizes to a sequence contained in a *Bacillus anthracis* target sequence. The methods and compositions of the present invention are useful for detecting the presence of *Bacillus anthracis* nucleic acid in a sample, in particular for detecting cutaneous and respiratory anthrax infections. Two synthetic genetic target sequences, derived from pagA and capB gene sequences, were synthesized to provide known standards for testing oligonucleotides for detection of the genes carried by the plasmids px01 and px02, without requiring handling of virulent *Bacillus anthracis*. The present sequence represents a capB target sequence.

CC The invention relates to detecting Bacillus anthracis in a biological or  
CC non-biological sample. The method involves (a) amplifying a portion of B.  
CC anthracis encapsulation protein B (capB) and/or protective antigen (pagA)  
CC and/or lethal factor (lef) nucleic acids using specific primers; (b)  
CC contacting the sample with a pair of capB and/or pagA and/or lef probes  
CC labelled with fluorescent moieties; and (c) detecting the presence or  
CC absence of fluorescence resonance energy transfer (FRET) between the  
CC probes. The method is useful for identifying B. anthracis DNA from  
CC specimens for diagnosis of B. anthracis infection and to identifying hoax  
CC cases of B. anthracis. The method can also be used for B. anthracis  
CC efficacy studies or epidemiology studies. The method is rapid, and allows  
CC real-time detection of B. anthracis in a biological sample or in a non-  
CC biological sample. The method is more sensitive and specific than  
CC existing assays. Sequences ACC71903-904 represent B. anthracis capB  
CC specific probes

CC The present invention describes an isolated nucleic acid molecule (I)  
CC comprising the 548 base pair (bp) sequence of ADF44842, which is an  
CC internal positive control (IPC) nucleic acid molecule. Also described:  
CC (1) a probe comprising (I) and a label; (2) an assay using the probe; (3)  
CC a kit for a probe-based nucleic acid assay comprising the isolated  
CC nucleic acid molecule (I) packaged with instructions for use; and (4)  
CC making an IPC nucleic acid molecule for a probe-based nucleic acid  
CC molecule assay. The nucleic acid molecule (I) is useful as an IPC in  
CC probe-based nucleic acid assay such as TaqMan (RTM) based assay. The  
CC present sequence is used in the exemplification of the present invention.

PT New oligonucleotides that hybridize specifically to a Bacillus anthracis
PT sequence, useful for detecting cutaneous and respiratory Bacillus anthrax
PT infections.
XX
PS Claim 9; SEQ ID NO 13; 61pp; English.
XX
CC The present invention relates to an oligonucleotide of 20-40 nucleotides
CC that specifically hybridizes to a sequence contained in a Bacillus
CC anthracis target sequence. The methods and compositions of the present
CC invention are useful for detecting the presence of Bacillus anthracis
CC nucleic acid in a sample, in particular for detecting cutaneous and
CC respiratory anthrax infections. Two synthetic genetic target sequences,
CC derived from pagA and capB gene sequences, were synthesized to provide
CC known standards for testing oligonucleotides for detection of the genes
CC carried by the plasmids pXO1 and pXO2, without requiring handling of
CC virulent Bacillus anthracis. The present sequence represents a capB
CC probe, used in the pXO1 and pXO2 detection kits.

PT transfer.
XX
XX Disclosure; Page 3; 31pp; English.
PS
XX
XX The invention relates to detecting Bacillus anthracis in a biological or
CC non-biological sample. The method involves (a) amplifying a portion of B.
CC anthracis encapsulation protein B (capB) and/or protective antigen (pagA)
CC and/or lethal factor (left) nucleic acids using specific primers; (b)
CC contacting the sample with a pair of capB and/or pagA and/or left probes
CC labelled with fluorescent moieties; and (c) detecting the presence or
CC absence of fluorescence resonance energy transfer (FRET) between the
CC probes. The method is useful for identifying B. anthracis DNA from
CC specimens for diagnosis of B. anthracis infection and to identifying hoax
CC cases of B. anthracis. The methods can also be used for B. anthracis
CC efficacy studies or epidemiology studies. The method is rapid, and allows
CC real-time detection of B. anthracis in a biological sample or in a non-
CC biological sample. The method is more sensitive and specific than
CC existing assays. Sequences ACC71913-914 represent B. anthracis capB
CC specific probes

Genetic marker for decreased activity of cytochrome p450 3a7(cyp 3a7)  
 protein and method for detection.

Example 2; SBQ ID NO 24; 36pp; Korean.

This invention describes a novel genetic marker for decreased activity of  
 cytochrome P450 3A7(CYP 3A7) protein. A method for detecting decreased  
 activity of cytochrome P450 3A7(CYP 3A7) is also provided, which is used  
 to anticipate drug response difference between individuals to a drug  
 metabolized by CYP 2D2. The genetic marker comprises a T nucleotide  
 insertion at between a C nucleotide at position 134 and T nucleotide at  
 position 135 of ADM03353 resulting in a termination codon at residue 55  
 of the CYP 3A7 protein represented in ADM03354. The marker can be  
 detected by amplifying the cytochrome P450 3A7 from a blood sample with  
 PCR primers ADM03350 and ADM03351 then pyrosequencing the PCR product  
 with a primer (ADM03352) to confirm the mutation of the CYP 3A7 gene.  
 This sequence represents CYP 3A7 genomic DNA.

 PS Example 2A; Page 229-295; 408pp; English.  
 XX  
 CC This invention relates to a transgenic non-human animal which may be used  
 CC for assessing the behaviour and/or metabolism of a drug in another animal  
 CC and which expresses a foreign polypeptide associated with drug behaviour  
 CC and/or metabolism. The invention also comprises a nucleic acid construct  
 CC for use in producing the above transgenic non-human animal and a method  
 CC of assessing the metabolism and/or behavior of a drug in an animal of  
 CC interest, comprising administering a test agent to the transgenic animal  
 CC and conducting analytical tests to determine drug metabolism and/or  
 CC behaviour. The transgenic animal is useful in studying drug metabolism  
 CC and/or behaviour in other animals. The nucleic acid construct is useful  
 CC in producing the above transgenic animal and the methods are used for  
 CC producing, breeding and using transgenic animals for pharmacological  
 CC (e.g. pharmacokinetic or pharmacodynamic assays) and/or toxicological  
 CC studies. Nucleic acid sequences used within the invention are serum  
 CC albumin; alpha-acidic glycoprotein; cytochrome P450 (CYP); uridine  
 CC diphosphoglucuronosyl transferase (UGT); multidrug resistance proteins  
 CC and (MRP's). The present sequence represents a DNA sequence used to  
 CC create a transgenic animal within the scope of the invention

 XX  
 PS Claim 14; SEQ ID NO 12273; 1766pp; English.  
 XX  
 CC The invention relates to an isolated nucleic acid comprising any one of  
 CC the 6213 antisense sequences given in the specification where expression  
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:  
 CC (1) a vector comprising a promoter operably linked to the nucleic acid  
 CC encoding a polypeptide whose expression is inhibited by the antisense  
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated  
 CC polypeptide or its fragment whose expression is inhibited by the  
 CC antisense nucleic acid; (4) an antibody capable of specifically binding  
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular  
 CC proliferation; (7) identifying a gene in an operon required for  
 CC proliferation; (8) identifying a compound that influences the activity of  
 CC the gene product or that has an activity against a biological pathway  
 CC required for proliferation, or that inhibits cellular proliferation; (8)  
 CC identifying a gene required for cellular proliferation or the biological  
 CC pathway in which a proliferation-required gene or its gene product lies  
 CC or a gene on which the test compound that inhibits proliferation of an  
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a  
 CC compound's activity; (11) a culture comprising strains in which the gene  
 CC product is overexpressed or underexpressed; (12) determining the extent  
 CC to which each of the strains is present in a culture or collection of  
 CC strains; or (13) identifying the target of a compound that inhibits the  
 CC proliferation of an organism. The antisense nucleic acids are useful for  
 CC identifying proteins or screening for homologous nucleic acids required  
 CC for cellular proliferation to isolate candidate molecules for rational  
 CC drug discovery programs, or for screening homologous nucleic acids  
 CC required for proliferation in cells other than S. aureus, S. typhimurium,  
 CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target  
 CC prokaryotic essential genes. Note: The sequence data for this patent did  
 CC not form part of the printed specification, but was obtained in  
 CC electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences

CC The invention describes a recombinant DNA construct comprising a  
CC polynucleotide consisting of a sequence encoding an amino acid sequence  
CC available in electronic form from the US patent office at  
CC ftp.segdata.uspto.gov/sequence.html?docid:2004034888. The polynucleotide  
CC of the invention are also useful in physical arrays of molecules and as  
CC plant breeding markers. The recombinant DNA construct is useful for  
CC improving plant tolerance to cold, heat, drought, herbicides, extreme  
CC osmotic conditions, pathogens or pests, for manipulating growth rate in  
CC plant cells by modification of the cell cycle pathway, for conferring  
CC increased resistance to plant disease, for producing galactomannan,  
CC lignin or plant growth regulators, for increasing the rate of homologous  
CC recombination in plants, for improving yield by modification of  
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake  
CC or by providing improved plant growth and development under at least one  
CC stress condition or for modifying seed oil or protein yield and/or  
CC content. This sequence represents a plant full length insert  
CC polynucleotide that can be used in the recombinant DNA construct of the  
CC invention.

PT 830 Primers useful for synthesizing full length cDNA clones and their use

PT in genetic manipulation.

PS Claim 8; SEQ ID NO 3720; 1380bp + Sequence listing; English.

CC The invention relates to primers for synthesizing full length cDNA  
 CC clones. 830 cDNA molecules encoding a human protein have been isolated  
 CC and nucleotide sequences of 5' and 3' ends of the cDNA molecules have  
 CC been determined. Primers for synthesizing the full length cDNA are useful  
 CC for clarifying the function of the protein encoded by the cDNA. The full  
 CC length clones were obtained by construction of full length enriched cDNA  
 CC libraries that were synthesized by the oligo-capping method. The primers  
 CC enable the production of the full length cDNA easily without any special  
 CC methods. The present sequence is a full length human cDNA of the  
 CC invention. Note: The sequence data for this patent did not form part of  
 CC the printed specification, but was obtained in CD-ROM format directly  
 CC from EPO

XX New prollyl oligopeptidase nucleic acids, designated 21163 nucleic acids,
PT useful for treating and/or diagnosing e.g. proliferative disorders,
PT neurodegenerative diseases, glial and neuronal disorders or
PT cerebrovascular disorders.
PS Claim 1; SEQ ID NO 3; 130pp; English.
XX
XX The invention relates to novel isolated nucleic acid molecules,
CC designated 21163 nucleic acid molecules, which encode novel prollyl
CC oligopeptidase family members. More specifically the invention relates to
CC 21163 nucleic acids comprising either a fully defined 4959 bp or 1914 bp
CC sequence given in the specification, which encode a prollyl oligopeptidase
CC having a sequence of 638 amino acids also fully defined in the
CC specification. The 21163 nucleic acid molecules have the following
CC activities: cytosolic, neuroprotective, nootropic, cerebroprotective,
CC virucide, immunosuppressive, dermatological, cardiant, cardiovascular,
CC nephrotropic, osteopathic, and hypotensive. The 21163 nucleic acid
CC molecules can be used in gene therapy to treat disorders. 21163 nucleic
CC acids and proteins are useful for treating and/or diagnosing
CC proliferative disorders (e.g. haematopoietic neoplastic disorders),
CC neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease
CC or Pick's disease), disorders that arise in the tissues in which it is
CC expressed (e.g. splenomegaly, or neoplasms), glial and neuronal disorders
CC (e.g. cerebral edema or hydrocephalus), cerebrovascular diseases (e.g.
CC hypoxia, ischaemia or infarction), infections (e.g. HIV or AIDS),
CC disorders involving T cells (e.g. transplant rejection), skin diseases
CC (e.g. vitiligo, melanoma, or lentigo), heart disorders (e.g. heart failure
CC or hypertensive heart disease), disorders involving blood vessels (e.g.
CC vascular cell wall injury) and red cells (e.g. anaemia), developmental
CC disorders (e.g. aplasia or thymic hypoplasia), and disorders of the
CC kidney, breast, prostate, testis, thyroid, pancreas, small intestine,
CC ovary, and skeletal muscle. The polypeptides are further useful as
CC antigens or immunogens to raise or test anti-21163 antibodies. The
CC polynucleotides may further be used in chromosome mapping, tissue typing,
CC forensic biology, and as surrogate markers. This polynucleotide sequence
CC represents a 21163 nucleic acid of the invention.

XX  
XX New recombinant DNA construct comprising a promoter positioned to provide  
XX PT for expression of a polynucleotide encoding a polypeptide from a  
XX PT microbial source, useful for producing plants with improved properties.  
XX  
XX Claim 1; SEQ ID NO 27237; 122pp; English.  
XX  
XX  
XX The invention relates to a recombinant DNA construct comprising a  
XX CC promoter functional in a plant cell, where the promoter is positioned to  
XX CC provide for expression of a polynucleotide encoding a polypeptide from a  
XX CC microbial source. The invention also relates to a transformed plant  
XX CC comprising the recombinant DNA construct and a method of producing a  
XX CC transformed plant having an improved property. The plant is a crop plant  
XX CC such as maize or soybean. The method of producing a transformed plant  
XX CC having an improved property comprises transforming a plant with the  
XX CC recombinant DNA construct and growing the transformed plant, where the  
XX CC polynucleotide or polypeptide is useful for improving plant properties.  
XX CC The recombinant DNA construct is useful for producing plants with  
XX CC improved plant properties, e.g. improved cold, heat or drought tolerance,  
XX CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,  
XX CC increased resistance to plant disease, better growth rate by modification  
XX CC of the cell cycle pathway with plant growth regulators, increased rate of  
XX CC homologous recombination, modified seed oil or protein yield and/or  
XX CC content, improved yield by modification of carbohydrate, nitrogen or  
XX CC phosphorus use and/or uptake, by modification of photosynthesis or by  
XX CC providing improved plant growth and development under at least one stress  
XX CC condition, improved lignin production or improved galactomannan  
XX CC production. This sequence represents a bacterial polynucleotide used in  
XX CC the scope of the invention. Note: The sequence data for this patent did  
XX CC not form part of the printed specification but was obtained in electronic  
XX CC format from USPTO at [seqdata.uspto.gov/sequence.html](http://seqdata.uspto.gov/sequence.html).

PT Classifying a breast cancer patient according to prognosis comprises  
PT determining the similarity between the level of expression of each of  
PT five genes in a cell sample taken from patient, to control levels.  
PS  
PS Disclosure; SEQ ID NO 17; 226pp; English.  
CC  
CC The invention relates to a method of classifying a breast cancer patient  
CC according to prognosis by determining the similarity between the level of  
CC expression of each of five genes for which markers are listed in the  
CC specification, in a cell sample taken from the breast cancer patient, to  
CC control levels of expression for each respective five genes to obtain a  
CC patient similarity value. The methods are useful for classifying a breast  
CC cancer patient according to prognosis. Kits and computer program products  
CC are useful for data analysis using the diagnostic, prognostic and  
CC statistical methods of the invention. This sequence corresponds to a  
CC marker used in the method of the invention.

PT Prognosis of neuroblastoma, based on measuring expression of one or more  
PT specific target genes, for example insulin-like growth factor binding  
PT protein-7, that are differentially expressed between patients with good  
PT and poor prognosis.  
XX  
XX Claim 1; SEQ ID NO 27; 104pp; French.  
PS  
PS The invention describes a method for prognosis of neuroblastoma  
CC comprising: extracting a biological material from a patient sample;  
CC contacting the material with at least one reagent (R) specific for any of  
CC 37 target genes (TG) of, e.g. 2667, 762 and 580 base pairs in length (SEQ  
CC ID Nos: 1-37) fully defined in the specification, provided that when the  
CC gene is any of SEQ ID Nos: 11, 17 or 37, then at least two (R) specific  
CC for different TG are used, and determining expression of at least one TG  
CC (or at least two for SEQ ID Nos: 11, 17 and 37). The method provides a  
CC very reliable differentiation between patients with good or poor  
CC prognoses. This sequence represents a neuroblastoma prognosis method target  
CC gene.

DR		WPI, 2003-201195/19.
DR		P-PBDB; ADF83695.
XX		
PT		New prollyl oligopeptidase nucleic acids, designated 21163 nucleic acids,
PT		useful for treating and/or diagnosing e.g. proliferative disorders,
PT		neurodegenerative diseases, glial and neuronal disorders or
XX		cerebrovascular disorders.
XX		
PS		Claim 1; SEQ ID NO 1, 130pp; English.
XX		
CC		The invention relates to novel isolated nucleic acid molecules,
CC		designated 21163 nucleic acid molecules, which encode novel prollyl
CC		oligopeptidase family members. More specifically the invention relates to
CC		21163 nucleic acids comprising either a fully defined 4959 bp or 1914 bp
CC		sequence given in the specification, which encode a prollyl oligopeptidase
CC		having a sequence of 638 amino acids also fully defined in the
CC		specification. The 21163 nucleic acid molecules have the following
CC		activities: cytotaxtic, neuroprotective, nootropic, cerebroprotective,
CC		vincidine, immunosuppressive, dermatological, radiant, cardiovascular,
CC		nephrotropic, osteopethic, and hypotensive. The 21163 nucleic acid
CC		molecules can be used in gene therapy to treat disorders. 21163 nucleic
CC		acids and proteins are useful for treating and/or diagnosing
CC		proliferative disorders (e.g. haematopoietic neoplastic disorders),
CC		neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease
CC		or Pick's disease), disorders that arise in the tissues in which it is
CC		expressed (e.g. splenomegaly, or neoplasms), glial and neuronal disorders
CC		(e.g. cerebral edema or hydrocephalus), cerebrovascular diseases (e.g.
CC		hypoxia, ischemia or infarction), infections (e.g. HIV or AIDS),
CC		disorders involving T cells (e.g. transplant rejection), skin diseases
CC		(e.g. vitiligo, melasma, or lentigo), heart disorders (e.g. heart failure
CC		or hypertensive heart disease), disorders involving blood vessels (e.g.
CC		vascular cell wall injury) and red cells (e.g. anaemia), developmental
CC		disorders (e.g. aplasia or thymic hypoplasia), and disorders of the
CC		kidney, breast, prostate, testis, thyroid, pancreas, small intestine,
CC		ovary, and skeletal muscle. The polypeptides are further useful as
CC		antigens or immunogens to raise or test anti-21163 antibodies. The
CC		polynucleotides may further be used in chromosome mapping, tissue typing,
CC		forensic biology, and as surrogate markers. This polynucleotide sequence
CC		represents a 21163 nucleic acid of the invention.

XX  
XX New cardiovascular system related polynucleotides and polypeptides,  
PT useful for diagnosing, treating and/or preventing disorders of the  
PT cardiovascular system.  
XX  
PS Claim 1, SEQ ID NO 1390; 674bp; English.  
XX  
XX Sequences AAS35741-AA356942 represent genomic DNA molecules, which encode  
CC the cardiovascular system antigen polypeptides of the invention.  
CC Cardiovascular system antigens and their associated polynucleotides are  
CC useful in the diagnosis, treatment and prevention of various types of  
CC disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs,  
CC chickens or sheep. A pathological condition can be determined by  
CC detecting the presence or absence of a mutation in a cardiovascular  
CC system antigen polynucleotide. The treatable disorders include autoimmune  
CC diseases such as rheumatoid arthritis, hyperproliferative disorders such  
CC as neoplasms of the breast or liver, cardiovascular disorders such as  
CC cardiac arrest, cerebrovascular disorders such as cerebral ischaemia,  
CC nervous system disorders such as Alzheimer's disease, infections caused  
CC by bacteria, viruses and fungi, ocular disorders such as corneal  
CC infection, endocrine disorders such as premature labour and infertility,  
CC gastrointestinal disorders such as Crohn's disease, renal disorders such  
CC as glomerulonephritis and respiratory disorders such as asthma and  
CC pleurisy. The polypeptides can also be used to aid wound healing, to  
CC prevent skin aging due to sunburn, to maintain organs before  
CC transplantation, to regenerate tissues and in chemotaxis. Note: The  
CC sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
XX at ftp.wipo.int/pub/published\_pct\_sequences

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-457717/49.

Isolated pancreatic cancer polypeptide for treating, preventing and/or  
prognosing disorders related to the pancreas including pancreatic cancers  
and also for testing and detection e.g. diagnosis.

Disclosure; SEQ ID NO 503; 537pp; English.

The invention relates to an isolated polypeptide comprising an amino acid  
sequence at least 90% identical to 188 amino acid sequences fully defined

XX  
PS Disclosure; SEQ ID NO 3392; 986bp; English.  
XX  
XX The present invention provides the protein and coding sequences of a  
CC number of human digestive system antigens. These can be used in the  
CC diagnosis, treatment and prevention of digestive system disorders,  
CC including cancer, Meckel's diverticulum, bacterial or parasitic  
CC infections, appendicitis, Hirschsprung's disease, chronic colitis or  
CC ulcerative colitis. The present sequence is a genomic DNA fragment  
CC encoding a digestive system antigen of the invention

 XX New cardiovascular system related polynucleotides and polypeptides,  
 PT useful for preventing, treating, or ameliorating a medical condition,  
 PT such as cancer of cardiovascular tissues and cancer metastases.  
 XX  
 PS Claim 1; SEQ ID NO 1390; 262pp; English.  
 XX  
 XX The invention relates to human cardiovascular system related polypeptides  
 CC and the polynucleotides encoding them. The polypeptides, polynucleotides  
 CC and antibodies to the polypeptides are useful for diagnosing a  
 CC pathological condition or a susceptibility to a pathological condition,  
 CC for preventing, treating, or ameliorating a medical condition, such as  
 CC cancer of cardiovascular system tissues, proliferative disorders, foetal  
 CC and developmental abnormalities, haematopoietic disorders, diseases of  
 CC the immune system, AIDS, autoimmune diseases (e.g., rheumatoid  
 CC arthritis), inflammation, allergies, neurological disorders (e.g.,  
 CC Alzheimer's disease, Parkinson's disease), cognitive disorders,  
 CC schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis,  
 CC diabetes, atherosclerosis, cardiovascular disorders, angiogenic  
 CC disorders, kidney disorders, gastrointestinal disorders, pregnancy-  
 CC related disorders, endocrine disorders and infections. The nucleic acids  
 CC are also useful for chromosome identification, radiation hybrid mapping  
 CC or long-range restriction mapping. The polypeptides and polynucleotides  
 CC may also be used as food additives or preservatives to increase or  
 CC decrease storage capabilities, fat content or other nutritional  
 CC components. This sequence represents human cardiovascular system related  
 CC genomic DNA of the invention.

XX  
XX (HUMA-) HUMAN GENOME SCI INC.  
XX  
PI Rosen CA, Ruben SM, Barash SC;  
DR WPI; 2004-081713/08.  
XX  
PT New cardiovascular system-related nucleic acid molecule, useful for  
PT diagnosing, preventing or treating diseases of the cardiovascular system,  
PT and in chromosome mapping, drug screening or in pharmacogenomics.  
XX  
PS Disclosure; SEQ ID NO 1390; 262bp; English.  
XX  
XX The invention relates to an isolated nucleic acid molecule encoding a  
CC human cardiovascular system associated polypeptide (or antigens), or its  
CC fragment. Also included recombinant vectors, recombinant host cells, an  
CC isolated human cardiovascular system associated polypeptide (including  
CC its fragment, allelic variant, species homologue or epitope), an isolated  
CC antibody that binds specifically to a human cardiovascular system  
CC associated polypeptide, diagnosing a pathological condition or  
CC susceptibility to a pathological condition (comprising determining the  
CC presence or absence of a mutation in human cardiovascular system  
CC associated nucleic acid and diagnosing a condition based on the presence  
CC or absence of the mutation), identifying a binding partner to human  
CC cardiovascular system associated polypeptides, the gene corresponding to  
CC the human cardiovascular system associated cDNA sequence and identifying  
CC an activity in a biological assay comprising expressing the human  
CC cardiovascular system associated cDNA in a cell, isolating the  
CC supernatant, detecting an activity in a biological assay and identifying  
CC the protein in the supernatant having the activity. The human  
CC cardiovascular system associated nucleic acids and polypeptides are used  
CC to prevent, treat or ameliorate a medical condition (for example in  
CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep), for  
CC example autoimmune diseases such as rheumatoid arthritis,  
CC hyperproliferative disorders, for example neoplasms of the breast or  
CC liver, cardiovascular disorders, for example cardiac arrest,

PT Oligonucleotide for diagnosis and therapy of diseases associated with  
PT signal transduction e.g. cancer, comprises chemically modified genomic  
PT sequences of genes associated with signal transduction.  
XX  
PS Claim 1; SEQ ID NO 232; 24bp; English.  
XX  
XX The present invention relates to chemically modified DNA sequences of  
CC signal transduction associated genes. The DNA sequences are chemically  
CC modified using a solution of bisulphite, hydrogen sulphite or disulphite.  
CC Also disclosed are oligonucleotides and/or PNA oligomers for detecting  
CC the cytosine methylation state (Cpg islands) of these genes, and a method  
CC for the diagnosis and/or therapy of genetic and epigenetic parameters of  
CC genes associated with signal transduction. The genomic DNA can be  
CC obtained from cells or cellular components which contain DNA, e.g. cell  
CC lines, biopsies, blood, sputum, stool, urine, cerebral-spinal fluid,  
CC tissue embedded in paraffin such as tissue from eyes, intestine, kidney,  
CC brain, heart, prostate, lung, breast or liver, histologic object slides,  
CC and all their possible combinations. The sequences of the invention are  
CC useful for the diagnosis and therapy of diseases associated with signal  
CC transduction e.g. solid tumours and cancer. ABK3158-ABK3155 represent  
CC chemically pretreated genomic DNA sequences of different genes associated  
CC with signal transduction, or their complementary sequences. Note: The  
CC sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from the  
CC European Patent Office

PT Nucleic acid, useful for diagnosis and therapy of diseases associated  
PT with cell signalling e.g. cancer, comprises chemically modified genomic  
PT sequences of genes associated with cell signalling.  
XX  
PS Claim 1; SEQ ID NO 226; 24bp + Sequence Listing; English.  
XX  
CC The invention relates to a nucleic acid comprising a sequence of at least  
CC 18 bases of a segment of chemically pretreated DNA of genes associated  
CC with cell signalling. The activity of the modified sequences of the  
CC invention may be described as cytostatic. The object of the invention is  
CC to provide the chemically modified DNA of genes associated with cell  
CC signalling, as well as oligonucleotides and/or PNA-oligomers for  
CC detecting cytosine methylations, as well as a method which is  
CC particularly suitable for the diagnosis and/or therapy of genetic and  
CC epigenetic parameters of genes associated with cell signalling. The  
CC chemically modified DNA provided by the invention is useful for diagnosis  
CC and therapy of diseases such as solid tumours and cancer. The sequences  
CC given in records ABU70111-ABU70626 represent chemically pre-treated  
CC genomic DNA's of genes associated with cell signalling. Note: The  
CC sequence data for this patent is not represented in the printed  
CC specification, but is based on sequence information supplied by the  
CC European Patent Office

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

## SUMMARIES

Result No.	Score	Query Match	Length	ID	Description
1	3.8	136264	3	US-09-949-016-12756	Sequence 12756, A
